Summary of Impacts

Links: See/submit [Condition Monitoring Observer Reports \(CMOR\)](#) and view the [Drought Impacts Reporter](#)

Hydrologic Impacts

- There are no known impacts at this time.

Agricultural Impacts

- There are no known impacts at this time.

Fire Hazard Impacts

- There are no known impacts at this time.

Other Impacts

- There are no known impacts at this time.

Mitigation Actions

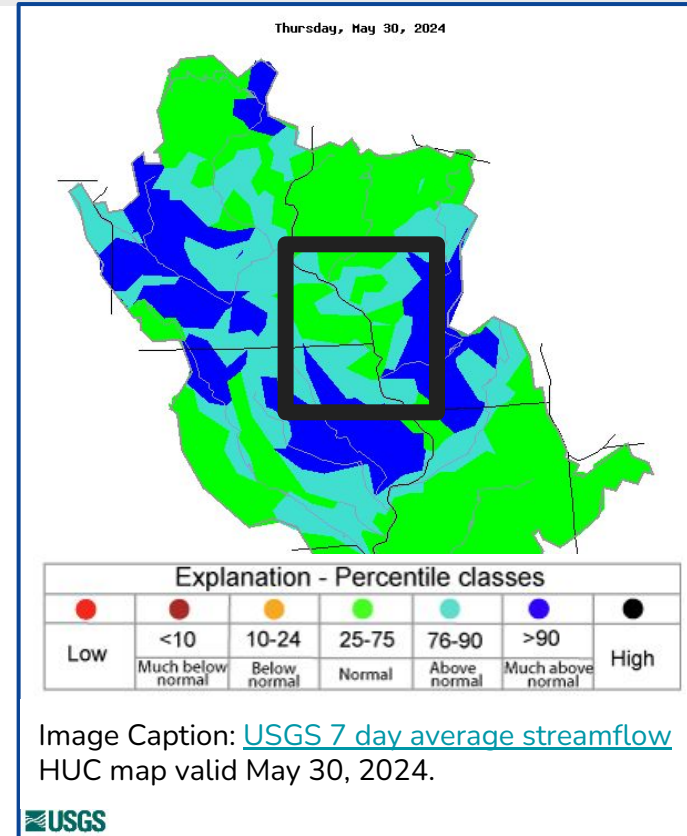

- No known actions are taking place in northeast Iowa, southeast Minnesota, and western Wisconsin.

Hydrologic Conditions and Impacts

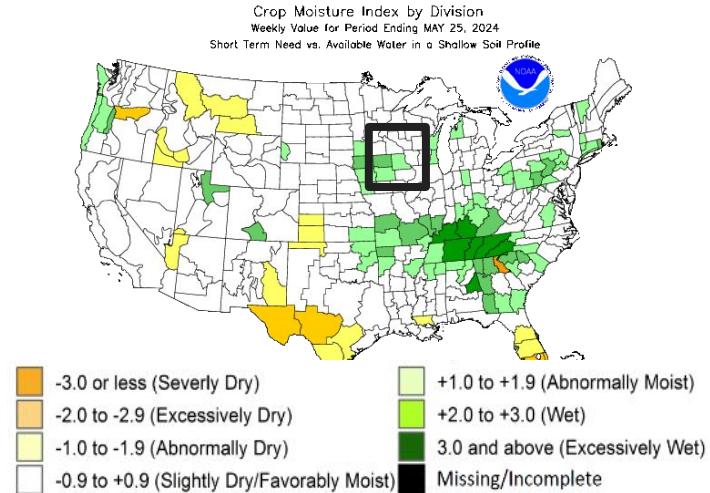

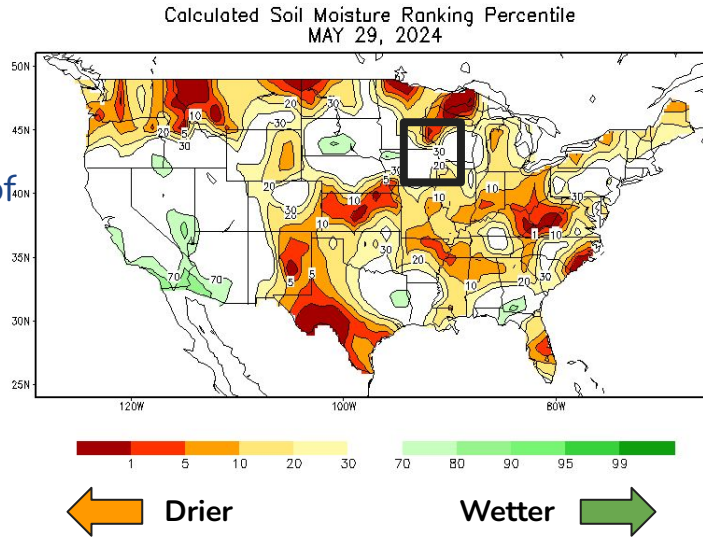

- From May 22 through May 28, rainfall totals ranged from 0.68" at the Winona Municipal Max Conrad Field Airport to 6" near Necedah.
- Normally, around 1" of precipitation falls during this period.
- The heaviest rainfall fell in the abnormally dry (D0) and drought areas. There has been enough precipitation to alleviate the drought along and south of Interstate 90. There is no longer any drought in the La Crosse Hydrologic Service Area.
- As of the morning of May 28, rivers and stream flows range from normal to much above normal in northeast Iowa, southeast Minnesota, and from central to western Wisconsin.

Agricultural Impacts

- Due to precipitation during the past 2 to 3 months, top soil moisture has become wetter than normal across much of the La Crosse Hydrologic Service Area.
