A large upper high pressure center strengthened over the Great Basin during the Labor Day weekend (September 4 to September 6) resulting in temperatures rising to much above normal levels over the San Joaquin Valley, West Side Hills and Kern County Deserts on September 6. The dangerous heat remained prevalent over the area through September 9 prompting the issuance of heat highlights as the large upper high produced a pronounced southeast flow over the area. A trough moved into northern California during the morning of September 10 bringing an end to the dangerous heat as afternoon highs remained below the century mark at most stations.

09/09/21 14:01 PST		0	Heavy Rain
09/09/21 16:57 PST		0	Source: ASOS

The ASOS at Edwards AFB measured 1.20 inches of rainfall from a thunderstorm between 1401 PDT and 1657 PDT.

The large upper high pressure center over the Great Basin not only provided much of the area with near record heat, but also spread some tropical moisture into the area on September 9 which resulted in scattered thunderstorms during the afternoon. Moderate to heavy rainfall occurred with some of the thunderstorms in the Kern County Deserts and along the Kern River Valley where several stations measured over half an inch of rainfall. Between a quarter and a half inch of rainfall in portions of the south end of the Upper Sierra. The rainfall was less significant elsewhere with most stations picking up between a trace to a tenth of an inch of rainfall. A few of the thunderstorms also produced strong outflow wind gusts in the Kern County Deserts.

09/27/21 19:40 PST		0	High Wind (MAX 53 kt)
09/28/21 19:00 PST		0	

An upper trough pushed through California between the evening of September 27 and the evening of September 28. A cold front associated with this trough brought a cooler airmass into the area along with increased pressure gradients which resulted in a period of gusty winds over the Kern County Mountains and Deserts. Several stations measured gusts around 60 mph during this timeframe. The winds diminished by the morning of September 29 as the trough moved to the east of the area.
