

NMM-b Implementation Verification Results – Warm Season

Verifications Performed By:

Allison Monarski

SCEP, Statistical Modeling Branch

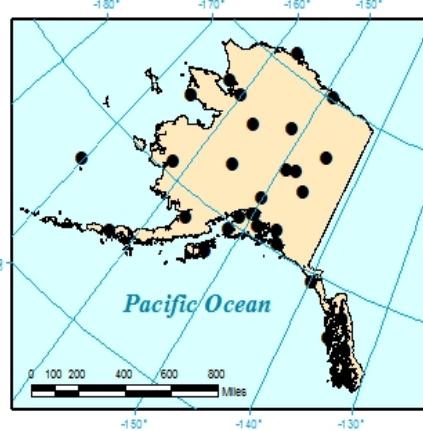

MDL/OST/NWS

For more information, please contact:

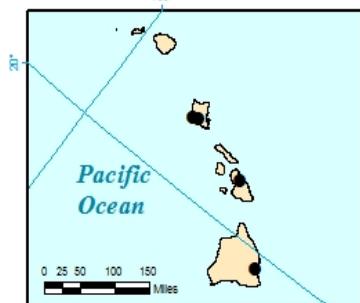

- Kathy Gilbert – kathryn.gilbert@noaa.gov
- Mark Antolik – mark.antolik@noaa.gov
- Allison Monarski – allison.monarski@noaa.gov

- Verifications of parallel NMM-b model output on the current NAM MOS system
- Compared to current operational NAM MOS system and GFS model
- Verification Period: April 1 – Sept. 30, 2010
 - Missing ~20 days worth of data
- SMB Standard 335 Verification Stations
 - 300 CONUS, 30 Alaska, 5 Hawaii/Puerto Rico

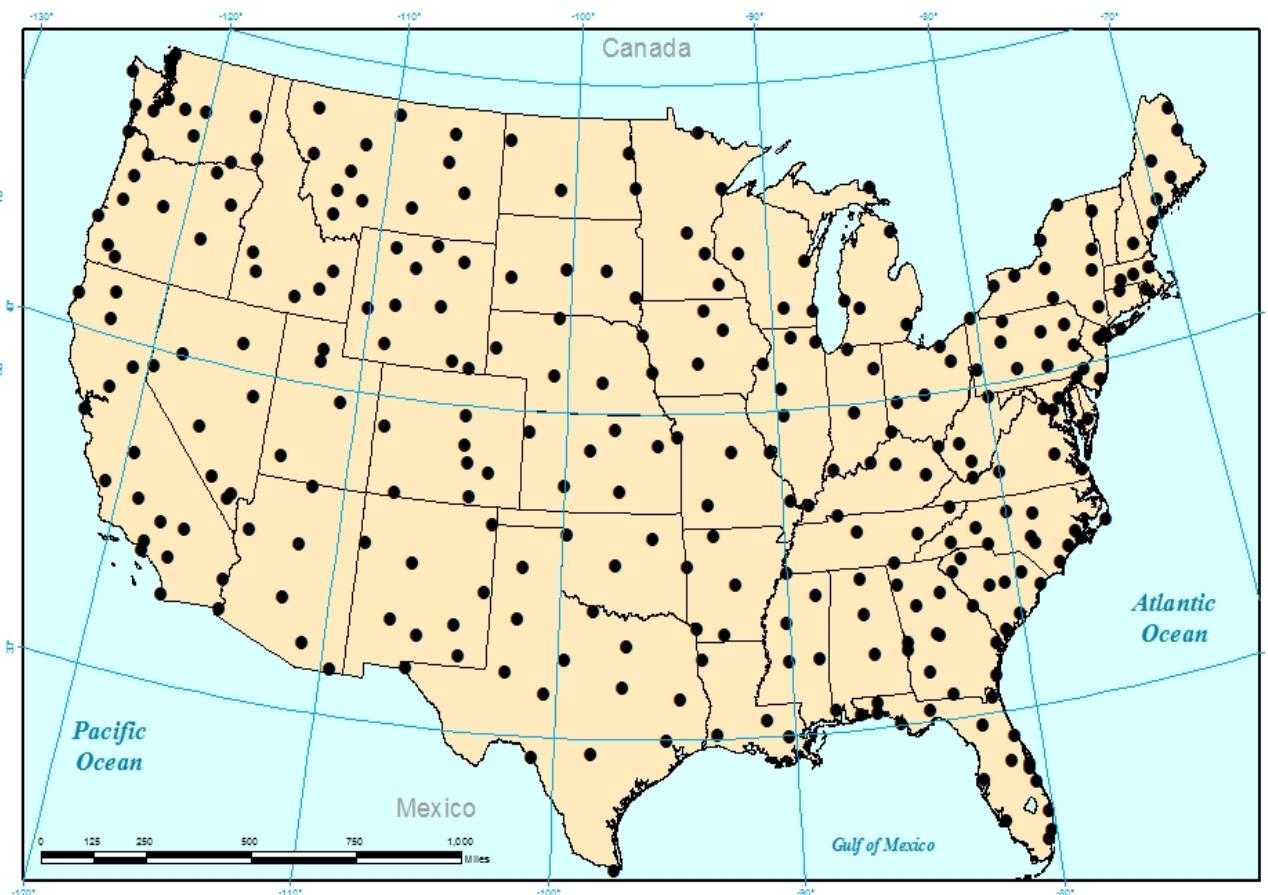

Alaska

Hawaii

Canada

MOS Verification Sites - 335 Stations

Albers Projection
Central Meridian: -96
1st Std Parallel: 20
2nd Std Parallel: 60
Latitude of Origin: 40

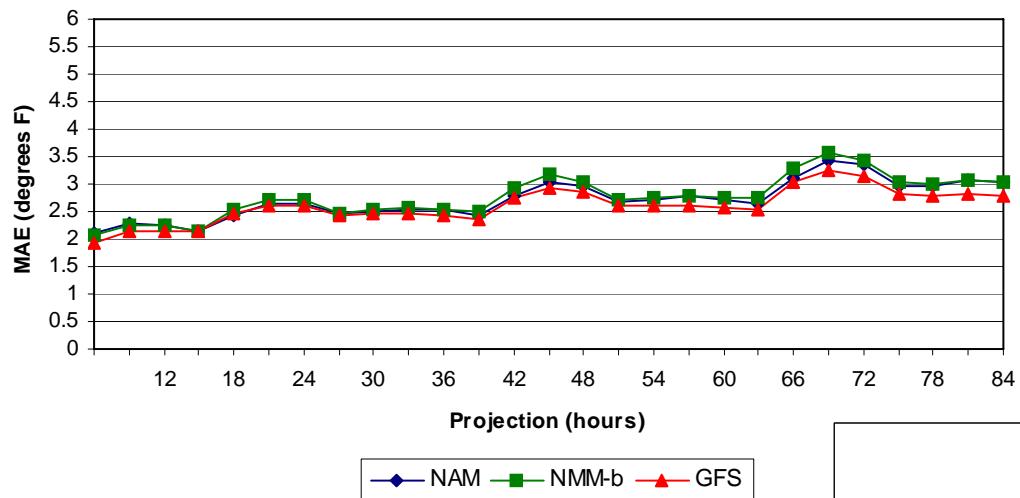

Parameters & Scores

- 2m Temperature, Dew Point, Max/Min Temp
 - MAE and Bias
- Wind Speed
 - MAE and HSS
- Wind Direction
 - MAE and CRF
- 06 & 12 hr POP
 - Brier Score

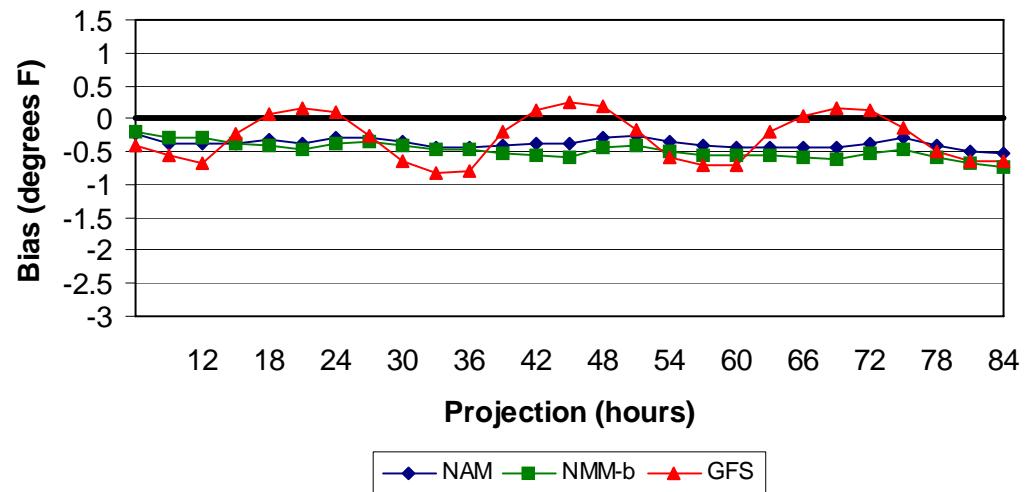

2m Temperature (6-84/every 3 hours)

00Z Temp MAE, Overall (335 stations)
April 1 - Sept 30, 2010

- All regions, NAM and NMM-b MAE are similar
- Differences < 0.2 degrees

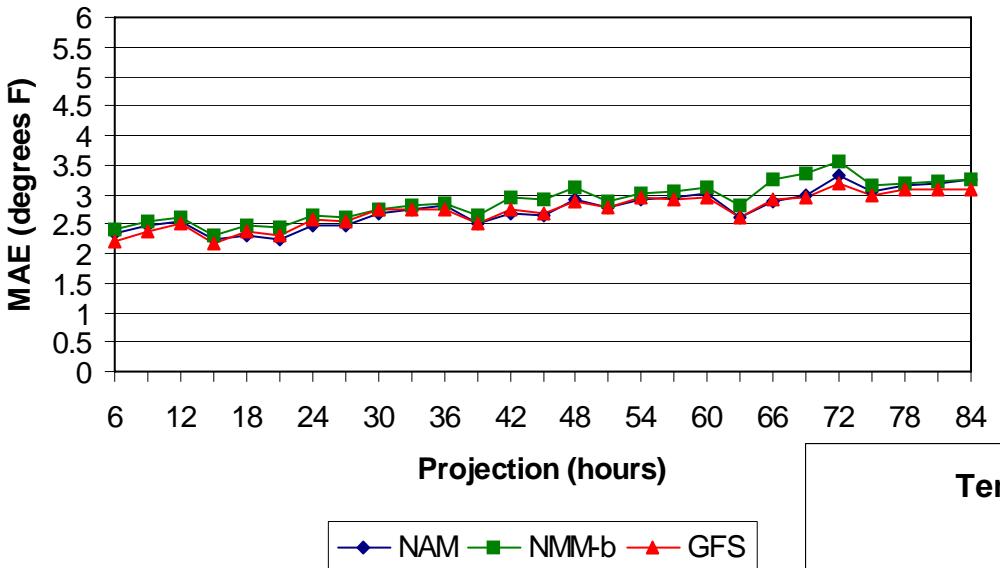

00Z Temp Bias, Overall (335 stations)
April 1 - Sept 30, 2010

- All models consistently cool
- NAM/NMM-b bias differences < 0.2 degrees

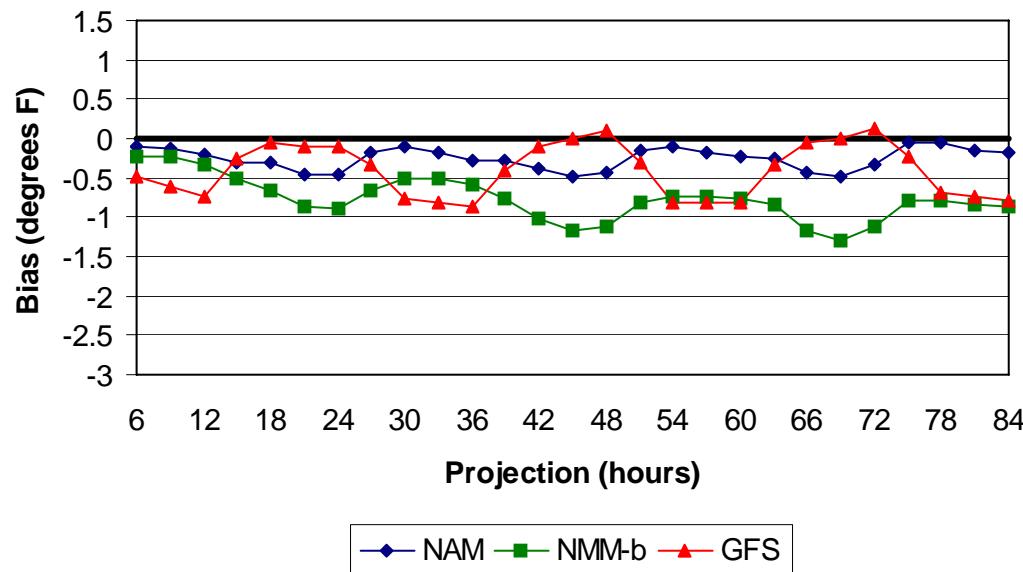

2m Temperature - Regional

Temperature MAE, Southwest CONUS (50 stations)
April 1 - Sept 30, 2010

- Regionally, NMM-b MAE similar in all regions, slightly worse in Southwest
- Differences < 0.5 degrees

Temperature Bias, Southwest CONUS (50 stations)
April 1 - Sept 30, 2010

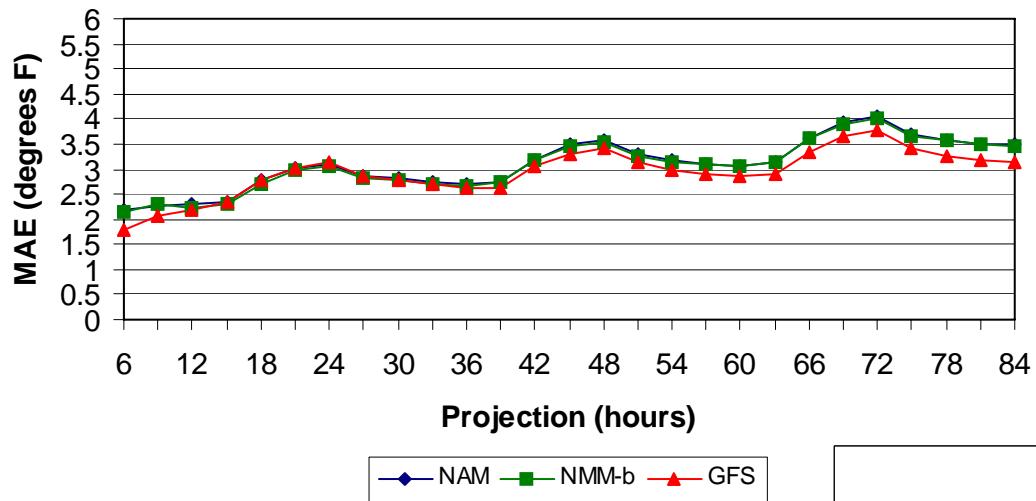

- NMM-b bias worse than NAM
 - Southwest, Southeast
- NMM-b bias better than NAM
 - Northeast, North Central
- NMM-b bias similar to NAM
 - South Central, Northwest
- Differences < 1 degree

Dew Point (6-84/every 3 hours)

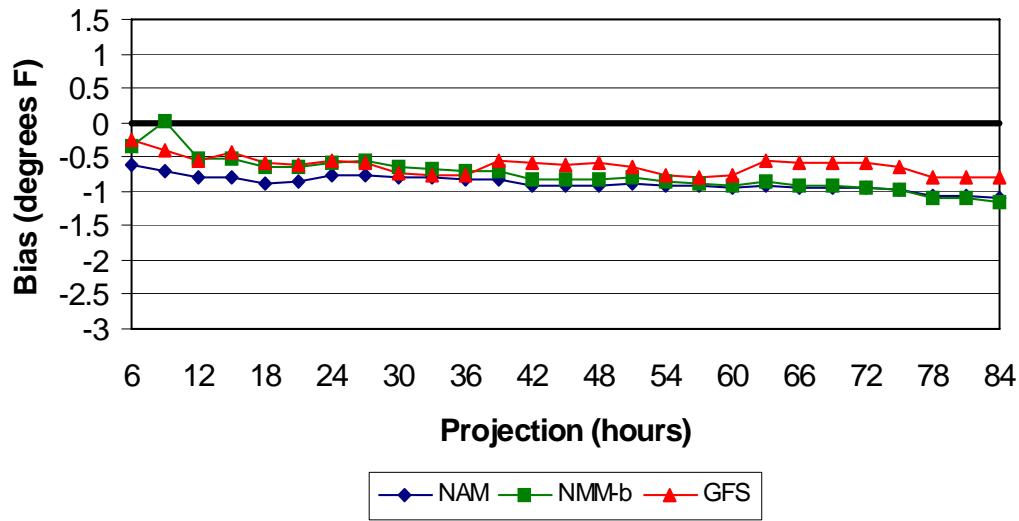

Dew Point MAE, Overall (335 stations)

April 1 - Sept 30, 2010

- NAM and NMM-b MAE similar across all regions
- Differences < 0.2 degrees

Dew Point Bias, Overall (335 stations)
April 1 - Sept 30, 2010

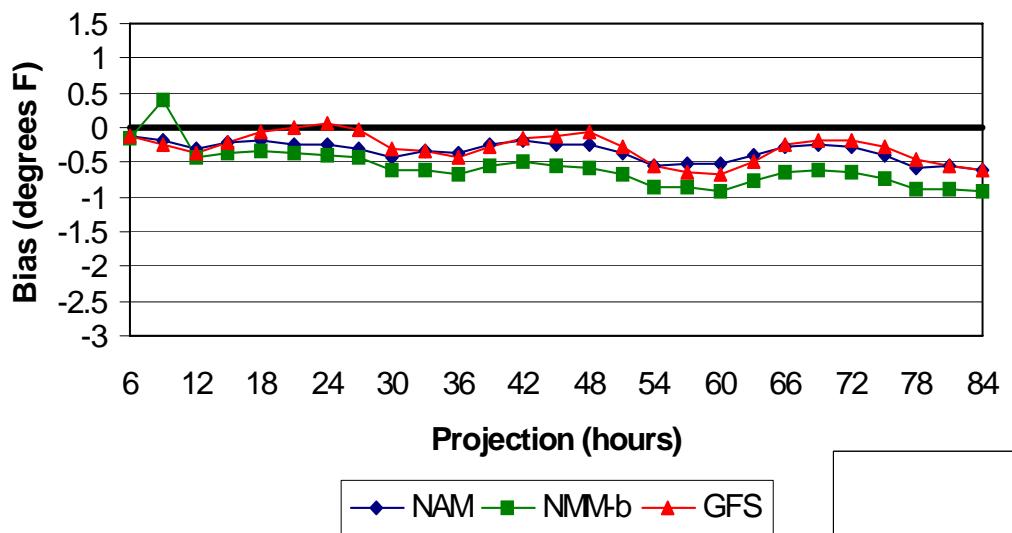

- All models consistently dry
- NMM-b bias better than NAM – Overall / CONUS
- Differences < 0.5 degrees

Dew Point – Alaska & Hawaii

Dewpoint Bias, Alaska (30 stations)

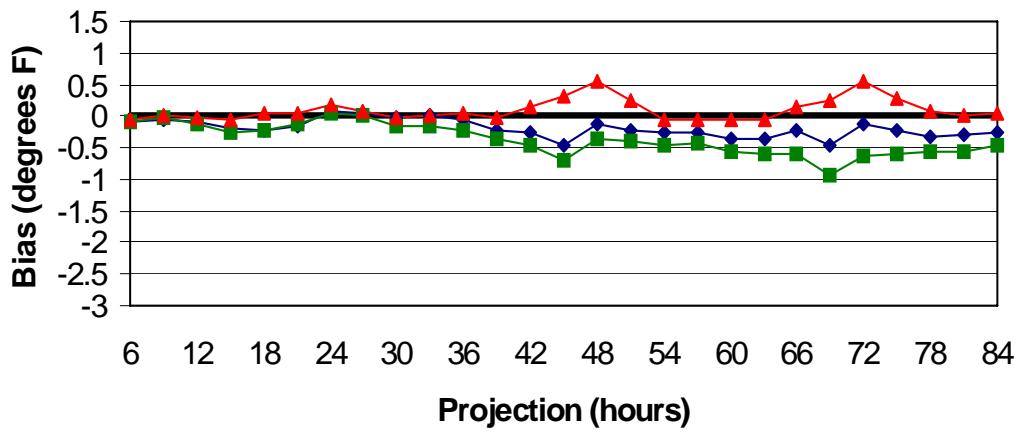

April 1 - Sept 30, 2010

- Alaska & Hawaii NMM-b bias slightly worse than NAM
- Differences < 0.5 degrees

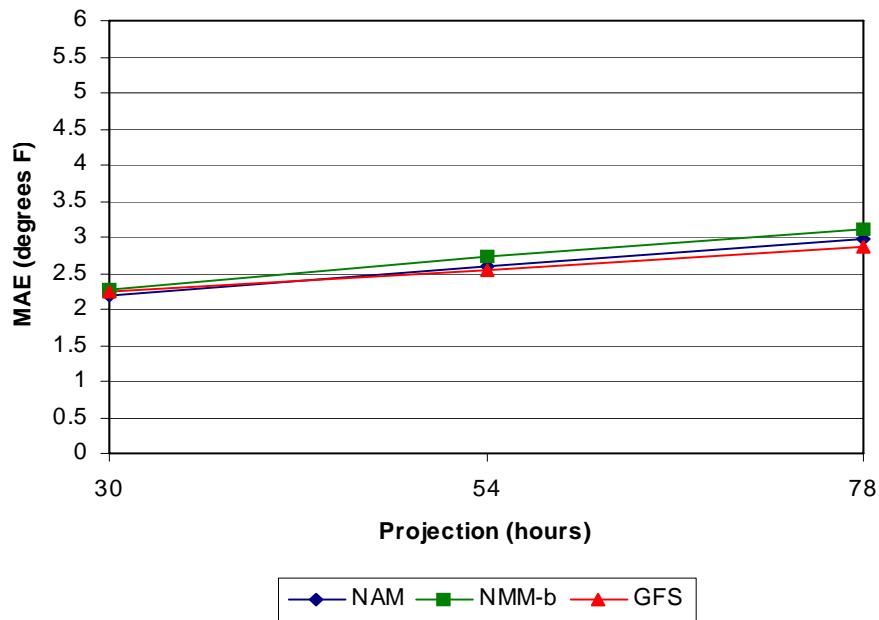

Dewpoint Bias, Hawaii/Puerto Rico (5 stations)

April 1 - Sept 30, 2010

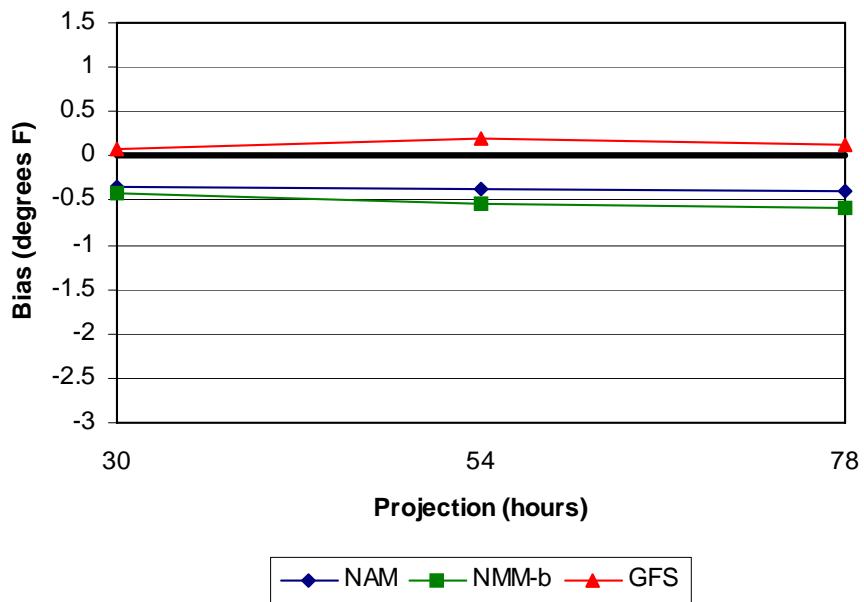

Max Temperature (30, 54, 78 hours)

Max Temperature MAE, Overall (335 stations)
April 1 - Sept 30, 2010

- NMM-b MAE similar to NAM in all regions
- Differences < 0.25 degrees

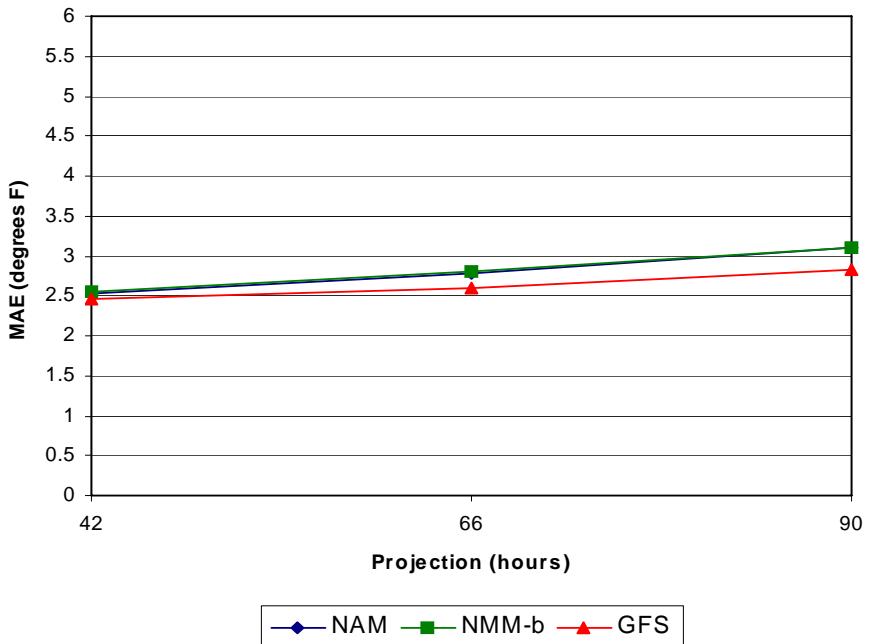

Max temperature Bias, Overall (335 stations)
April 1 - Sept 30, 2010

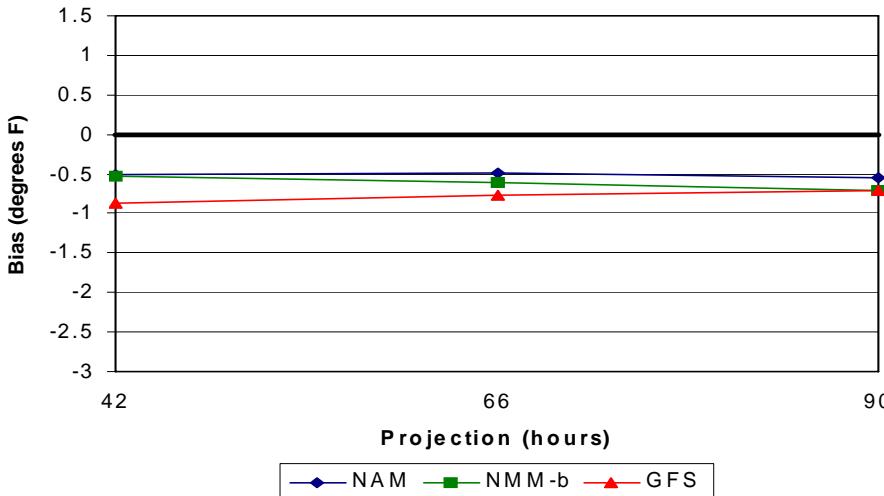

- NMM-b Bias similar to NAM
- Differences < 0.2 degrees
- Cool bias across all regions – warm in Hawaii

Min Temperature (42, 66, 90 hours)

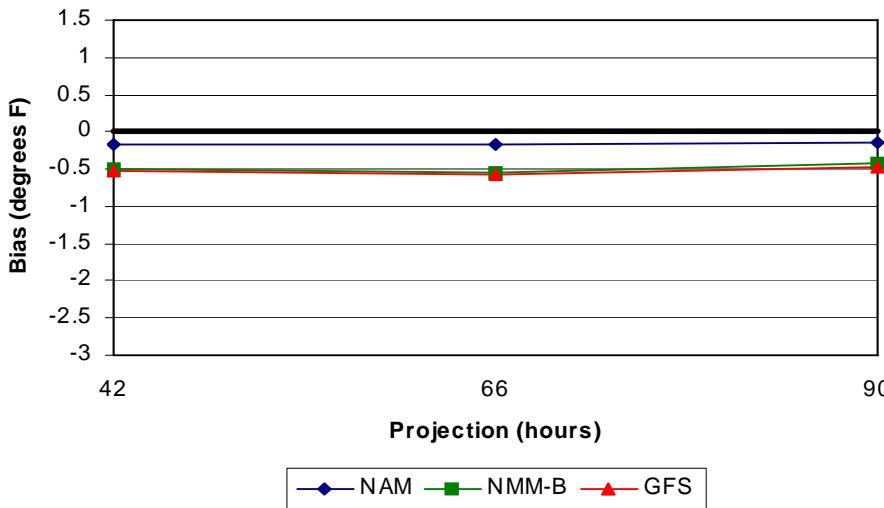

Min Temperature MAE, Overall (335 stations)
April 1 - Sept 30, 2010

Min Temperature Bias, Overall (335 stations)
April 1 - Sept 30, 2010

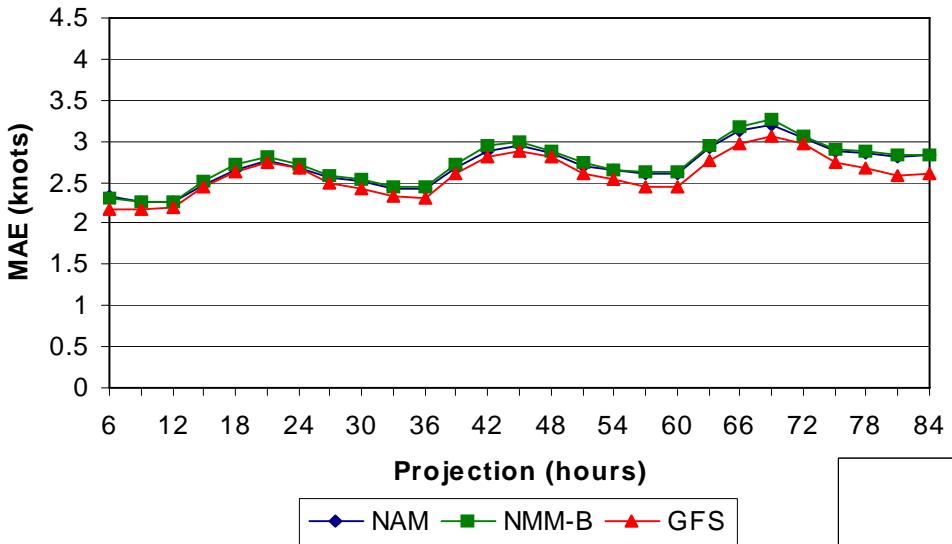

Min Temperature Bias, Alaska (30 stations)
April 1 - Sept 30, 2010

- NMM-b and NAM MAE similar across all regions
 - Differences < 0.1 degrees
- NMM-b bias slightly worse than NAM – esp. Alaska
 - Differences < 0.5 degrees

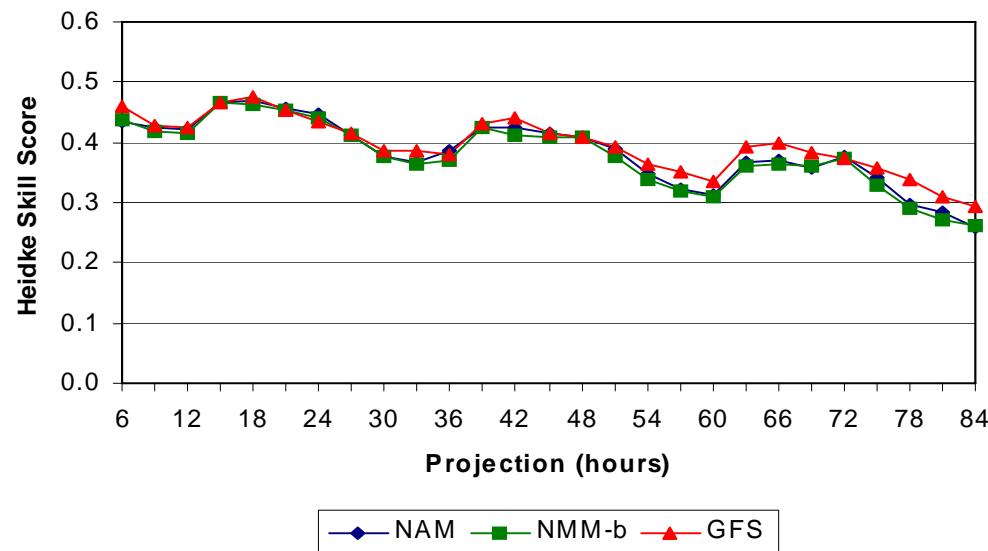

Wind Speed – MAE & HSS

Wind Speed MAE, Overall (335 stations)
April 1 - Sept 30, 2010

- NMM-b MAE very similar to NAM across all regions
- Slightly worse in Alaska (next slide)
- Differences < 0.25 knots

Wind Speed HSS, Overall (335 Stations)
April 1 - September 30, 2010

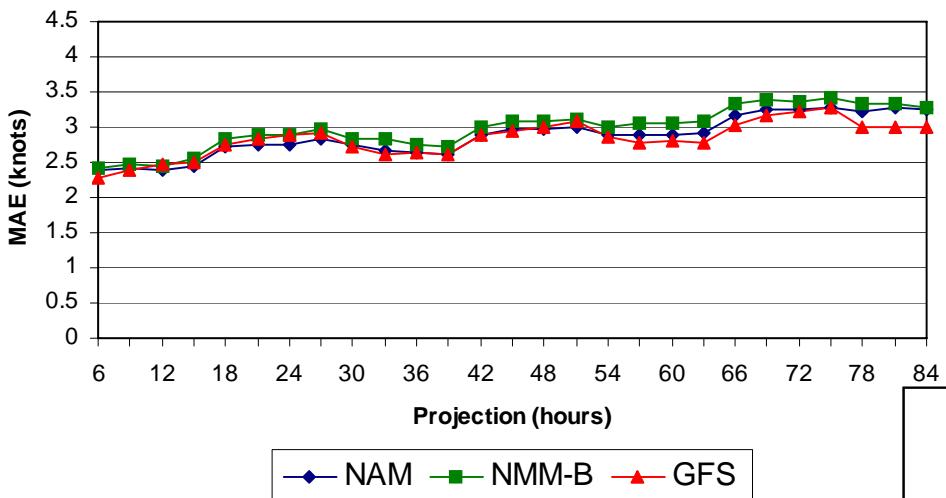

- NMM-b skill very similar to NAM across all regions
- Slightly worse in Alaska (next slide)
- Differences < 0.05

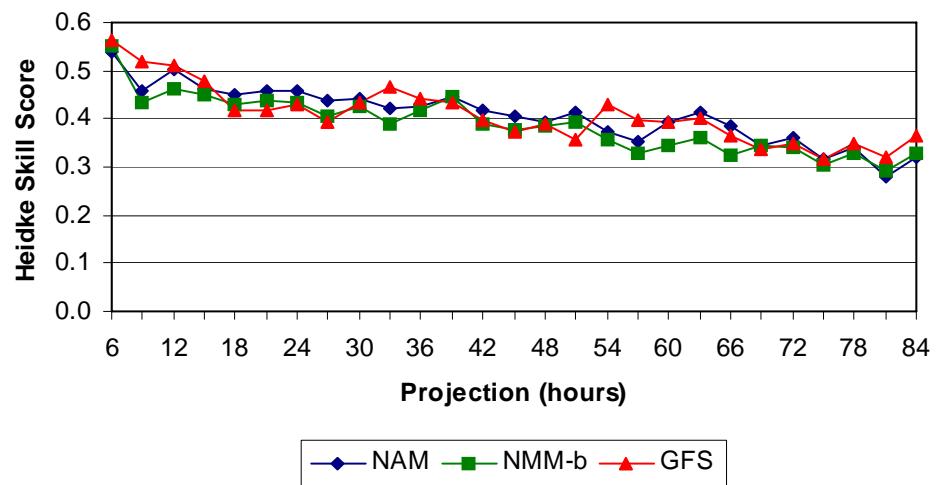

Wind Speed – MAE & HSS

Alaska

Wind Speed MAE, Alaska (30 stations), April 1 - Sept 30, 2010

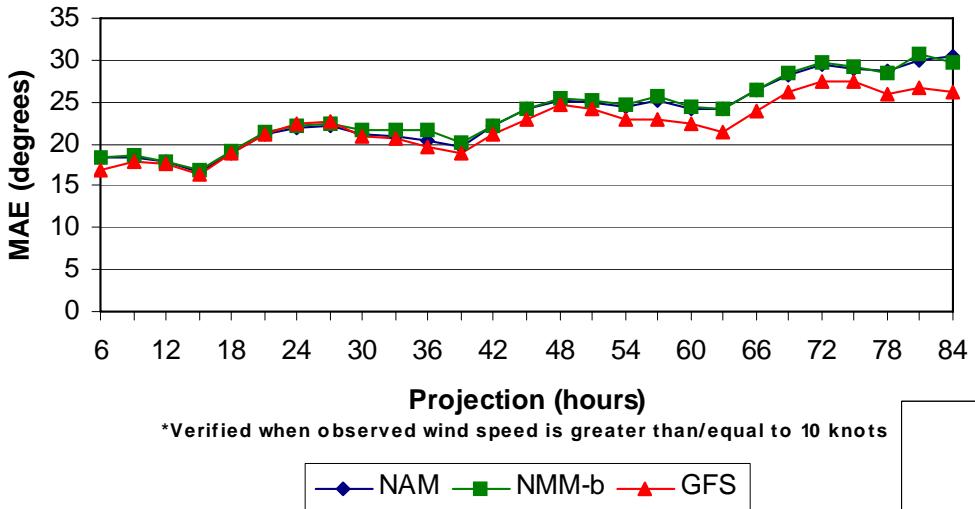

Heidke Skill Score - Wind Speed, Alaska (30 stations), April 1 - September 30, 2010

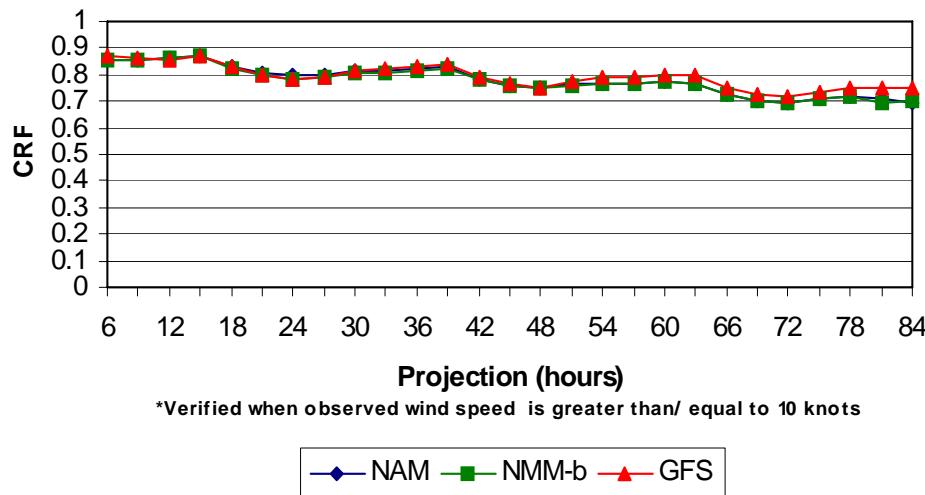

Wind Direction – MAE & CRF

Wind Direction MAE, Overall (335 stations)
April 1 - Sept 30, 2010

- NMM-b MAE very similar to NAM across all regions

Cumulative Relative Frequency of Errors less than/equal to 30 degrees - Wind Direction Overall (335 stations), April - Sept, 2010

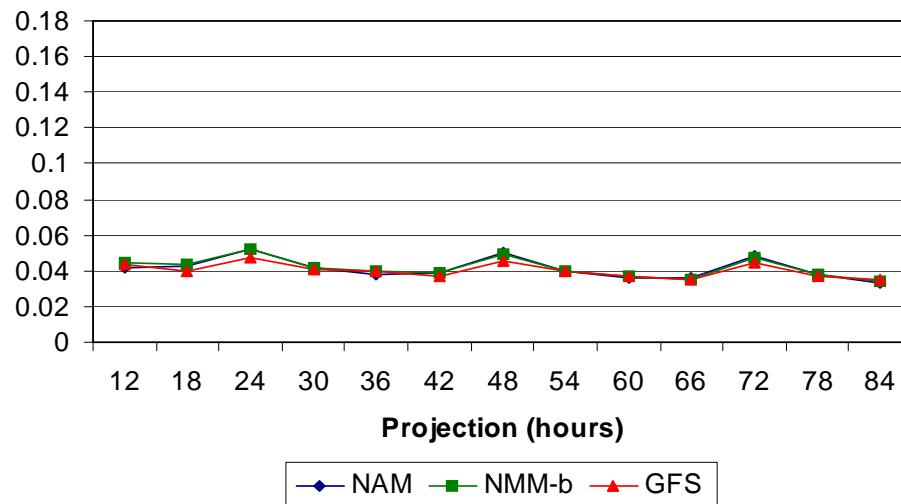

- CRF for all models very similar across all regions

06 hour POP – Brier Score

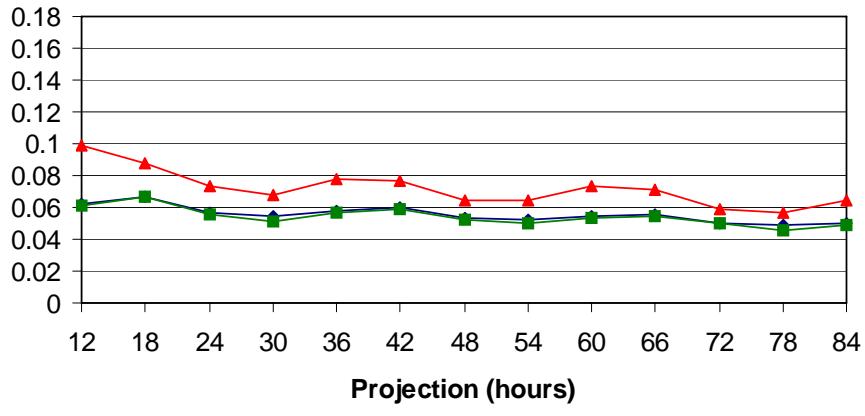

6hr Precipitation Brier Score, CONUS (300 stations)
April - September, 2010

Brier Score

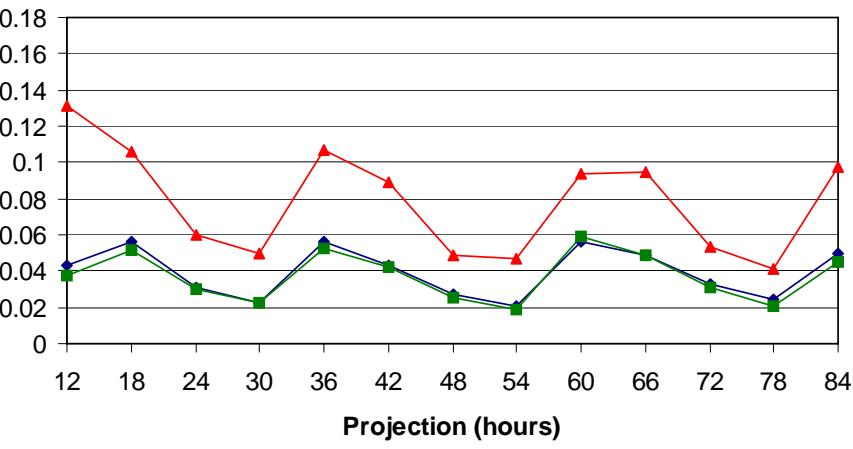

6 hour Precip Brier Score, Alaska (30 stations), April - September, 2010

Brier Score

6hr Precip Brier Score, Hawaii/Puerto Rico (5 stations), April - September, 2010

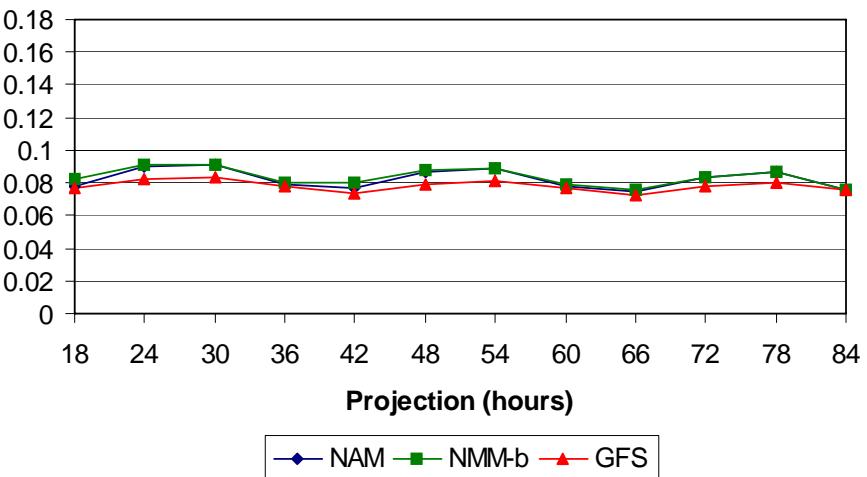

Brier Score

12 hr POP – Brier Score

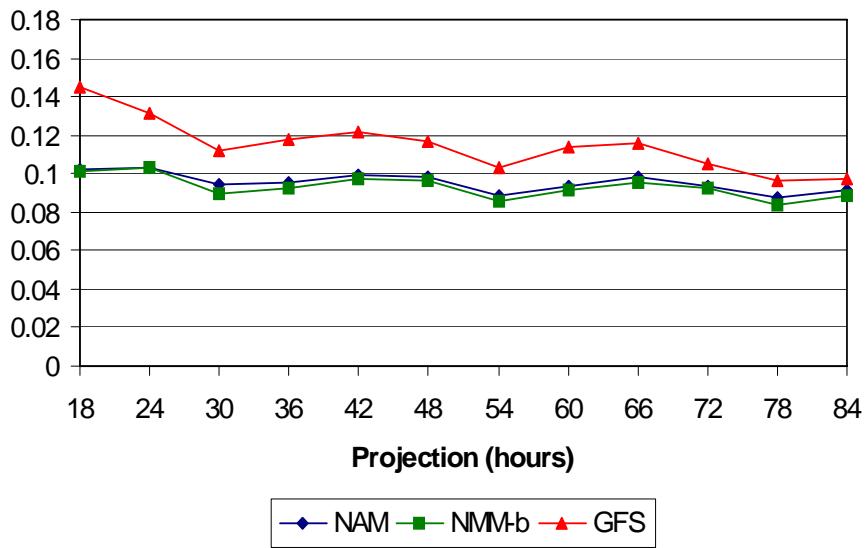

12 hr Precip, Brier Score, CONUS (300 stations)
April 1 - September 30, 2010

Brier Score

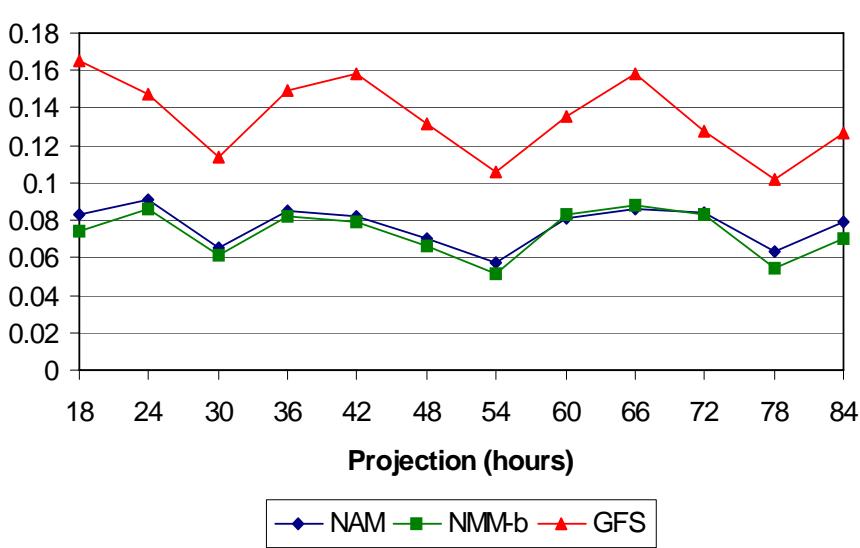

12 hr Precip, Brier Score, Alaska (30 stations)
April 1 - September 30, 2010

Brier Score

12 hr Precip, Brier Score, Hawaii/Puerto Rico
(5 stations), April 1 - September 30, 2010

Brier Score

- Overall/CONUS – Brier Scores similar for NAM & NMM-b and slightly higher than GFS
- Alaska/Hawaii – Brier Scores similar for NAM & NMM-b and lower than GFS

Warm Season Overall Summary

- NMM-b exhibits slight cool/dry bias in some situations. However, MOS forecasts generated from operational NAM system and NMM-b output verify similarly overall
- We expect no significant warm-season impacts to MOS with the NMM-b implementation
