Subject: Additions and Changes to the BUFR station lists for the NAM, GFS, RAP, HRRR, SREF and Hi-ResW: Effective July 11, 2018

Effective on or about Wednesday, July 11, 2018, beginning with the 1200 Coordinated Universal Time (UTC) model distribution, the National Centers for Environmental Prediction (NCEP) will modify the list of stations for which station time series Binary Universal Form for the Representation of meteorological data (BUFR) data are generated for the North American Mesoscale (NAM) model, the Global Forecast System (GFS), Short-Range Ensemble Forecast System (SREF), and the High-Resolution Window (Hi-ResW) system.

The changes will also be made to the Rapid Refresh (RAP) and High-Resolution Rapid Refresh (HRRR) models as part of their scheduled larger updates on the same day. The Service Change Notice for the RAPv4, HRRRv3 can be found here:

[https://www.weather.gov/media/notification/pdfs/scn18-58rap\\_hrrr.pdf](https://www.weather.gov/media/notification/pdfs/scn18-58rap_hrrr.pdf)

The new stations being added to all of the models mentioned above are listed in Table 1 below. A short set of international stations being added to only the GFS is listed in Table 2 below. Stations being changed are listed in Table 3 below. No stations are being removed. There will be no accompanying NOAAPort changes to the lists of stations in the NAM or GFS model BUFR sounding collectives.

The high-resolution NAM nests use the same station list as the parent 12 km NAM, so any changes to the list involving locations within a particular nest impact that nest's BUFR output as well. All of the new and modified sites are in the CONUS nest; no other nests have any changes.

Table 3: Changes to Existing Sites being made to the BUFR Lists. The numerical and character identifications are provided:

The location of station 362 (B44, Eagle Pass, TX) is corrected from 28.39N, 110.29W to 28.39N, 100.29W.

The location of station 366 (B48, Cudjoe Key, FL) is corrected from 24.70N, 80.51W to 24.70N, 81.51W.

The character identifier for station 862 (Morris, IL) is changed from C09 to KC09 to avoid a conflict.

Station 726685 (Mobridge, SD) is moved from 45.53N, 100.43W to 45.55N, 100.41W and the character identifier is changed from KY26 to KMBG.

NCEP will evaluate all comments to determine whether to proceed with this upgrade.

Questions or comments concerning this implementation should be directed to the contact below.
