Subject: Amended: Cancelled NGAC Aerosol Forecast System: Effective April
5, 2016

Amended to cancel the upgrade.

Effective immediately, the National Centers for Environmental Prediction (NCEP) will cancel the upgrade of the NOAA Environment Modeling System (NEMS) Global Forecast System (GFS) Aerosol Component Version 2 system (NGACv2).

External evaluation of proposed Q2FY16 NGAC upgrades indicated significant errors in the additional sulfate, particulate organic matter and sea salt components. Preliminary investigation suggested problems with the source functions (biomass emission data sets) and/or model physics. The model development team is working on addressing these issues. The team has proposed a revised plan for FY16 NGAC upgrades projected for implementation in August 2016. The current NCEP Central Operations (NCO) parallel runs for NGAC upgrades are being suspended. A revised implementation schedule will be announced in a separate Technical Implementation Notice (TIN).
