

Montana Weather/Precipitation Summary

March 2019 NOAA's National Weather Service Great Falls Montana

March 2019 was one of the colder Marchs of record in Montana. A large trough of low pressure dominated for the first 10 days, transitioning to a ridge over the west coast (Fig. 1). This kept a steady stream of cold air from the north over Montana for the first part, with milder air for the last 20 days. Precipitation was generally below normal with winds at record low levels.

March temperature anomalies ranged from four to 17°F below normal. The map below shows the variation. The warmest average temperatures were in western Montana. The warmest, Thompson Falls had an average temperature of 33.5°F, while the coolest was 15.2°F at Elk Park. The highest temperature was 75°F at Yaak on the 21st. The coldest temperature was -46°F at Elk Park on the 3rd. This absolute range of 121°F is the greatest in any March since 1978 (March's record is 125°F), and the greatest for any month since February 2006. In February 2006, the high temperature was 72°F and the low -54°F, a range of 127°F. The state-wide temperature average of 23.6° was 9.6°F below normal and coldest since 2002. Some locations across southwest Montana had their coldest March of record. The red line on the graph shows the cumulative 12-month departure from normal, which is 1.4°F below normal. See the state summary and temperature tables below for more details.

Generated 4/4/2019 at HPRCC using provisional data.

NOAA Regional Climate Centers

Temperature departure from normal

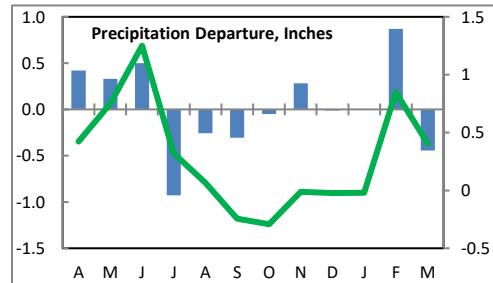

The red line on the graph shows the cumulative 12-month departure from normal, which is 1.4°F below normal. See the state summary and temperature tables below for more details.

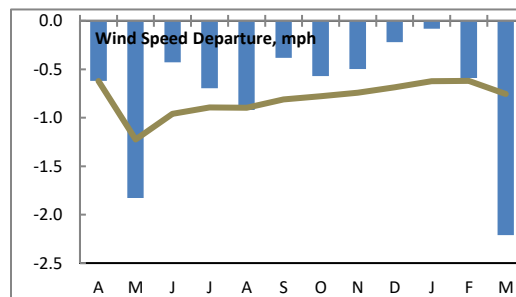

Precipitation was heaviest along the western border. The highest amount (3.50-inches) fell at Noisy Basin SNOTEL. The highest amount elsewhere was 1.86-inches at Hamilton. The statewide composite average of 0.51-inches was 0.44" below and the driest since 2004. The green line on the precipitation graph shows the cumulative 12-month departure from normal, which is 0.41" above normal. See state summary and precipitation tables below for more details. The heaviest monthly snow amount was 31.5-inches at Mystic Lake. The state average snowfall was 4.6-inches, which is the lowest since 2016.

Percent of normal precipitation

Winds averaged much less than normal over the state. Statewide, the month ranked as the calmest March of record, with an average speed of 7.2-mph. The strongest averages were along the northern Rocky Mountain Front. The composite statewide average was 2.2-mph below normal. The brown line of the wind graph to the right shows the 12-month cumulative statewide wind departure from normal. The 12-month average is running 0.8-mph below normal. All months since January 2018 have had below average wind speeds.

Statewide average soil moisture conditions are near normal for March (right).

Refer to NCEI's State of the Climate report for the latest monthly discussion:
<http://www.ncdc.noaa.gov/sotc/>

The cold and snowy pattern from February persisted into early March. Blizzard conditions prevailed over the north central on the 1st, while up to 10-inches of snow fell at Fishtail (Stillwater). The coldest morning of the month occurred on the 3rd when a reading of -46°F was reported at Elk Park. Many locations in central and southwest Montana reported their coldest March temperature of record during this period. A summary of records set during March follows in the table of records.

The temperature finally went above freezing at Great Falls on the 7th. This 32-day period broke the previous long period of 31-days ending February 14, 1929. Since records began at Great Falls (1891), there have been only 8 winters during which the temperature failed to reach freezing for more than 20 consecutive days.

The cold and snowy conditions prevailed for the first 10 days. Heavy snow fell over the southeast on the 9th. Broadus and Ekalaka reported up to 9-inches of snow. Some buildings had roof failures due to the weight of the accumulated snow. Ice jam flooding started in southwest Montana on the 9th. Windy and warmer conditions pushed into portions of eastern Montana on the 11th. Ground blizzard conditions caused roads to be closed along the Rocky Mountain Front. Wind gusts reached 68 mph at Two Medicine and 74 mph near Choteau. Heavy snow fell over northwest Montana, with Hungry Horse picking up 8-inches of snow.

From the 16th through the rest of the month, warmer weather brought melting snow and flooding. Many rivers and streams were flooding, with ice jams producing very high water. An ice jam on the Missouri River at the Fred Robinson Bridge produced one of the highest stages since the 1950s. Flooding also caused the closure of I-90 from Hardin to the Wyoming border for a period starting on March 23. The nearby Big Horn River flooded and water was covering the interstate near Crow Agency.

Great Falls also had 13-days with a foot or more snow on the ground. This is the second longest such period. The longest was a 15-day period ending February 26, 1936. Helena had a 20-day stretch with a foot or more on the ground, a new record. The old record was 19-days ending February 8, 1962. They also had a record 31-day stretch with 10-inches or more on the ground, ending March 18. The old record was 29-days ending February 23, 1978.

--	----------	----------------	---------	--------------

Precipitation/convection

Severe convective weather occurred on 0 days in March, which is normal.

February and March

February and March both averaged well below normal across the state. At many locations, this year had the coldest February and March combined of record.

Sites recording their coldest combined February and March average temperature of record.

Location	Average Period Temp	Old Record
Billings	18.9°F	19.4°F in 1936
Bozeman	13.4°F	14.2°F in 1969
Dillon	16.1°F	20.8°F in 1969
Great Falls	11.6°F	14.4°F in 1936
Lewistown	12.7°F	15.1°F in 1936
Missoula	22.7°F	22.9°F in 1894

Water year (Oct-Mar)

For the water year, the temperature average was 25.1°F, 3.5°F below normal. The cold February and March brought the average down, as both December and January had above average temperatures. This was the 13th coolest such season, and the coolest since 2003.

Composite precipitation totaled 5.75-inches, 0.65" above normal. This was the 45th wettest of record. Last water year was even wetter, ranking 7th wettest. Heavy snow has fallen in most areas. The composite snowfall was 58.3-inches, ranking 24th highest and nearly 10-inches above normal. Last winter was 2nd snowiest with 50.8-inches. For the water year, the precipitation average of 5.24-inches is the 27th wettest of record. Average snowfall of 53.7-inches is the 13th highest of record.

Although December was windy, February had very light winds so the season's average of 8.7-mph was the 13th calmest of record and calmest winter since 2014-15. For the water year, average winds of 8.5-mph rank as 8th lightest of record and lightest winds for such period since 2008.

March information:

High Temperature	75°F at Yaak (21 st)	Greatest Precip	1.86" at Hamilton
Low Temperature	-46°F at Elk Park (3 rd)		3.5" at Noisy Basin
Warmest Ave Temp	33.5°F at Thompson Falls	Peak Wind Gust	74 mph near Choteau (12 th)
Coollest Ave Temp	15.2°F at Elk Park		94 mph at Deep Creek (11 th)
Range of Temp departures	-0.4°F at Mullan Pass to -16.6°F at Bozeman Apt	Highest Ave Wind	13.1 mph at Browning 13.2 mph at Deep Creek RAWS
21 city mean monthly Temperature/Normal	23.6/33.2F normal. 13 th coldest of record (since 1880). 10 th percentile.	20 city mean monthly wind speed/Normal	7.2 mph/9.4 mph; 1 st calmest of record (since 1936). 1 st percentile.
22 city mean monthly precipitation/Normal	0.51"/0.95" - 53% of normal. 15 th driest of record (since 1880). 11 th percentile.	20 city mean monthly snowfall/Normal	4.6"/8.9" -4.3" 14 th percentile.
