Under an extensive thick layer of cirrostratus. Cold, temp 38F. Humidity, 63%. Light wind from South. Will wait for clearer skies before beginning obs. Will run Dpmon in manual mode until that time.

WEATHER COMMENT: Mon Oct 31 00:09:31 GMT 1994

Have been under thick cirrus since dawn. No holes have appeared and very little thinning in clouds. Unlikely to get any decent viewing for rest of day. PAU.

No Observations
