COMMENT: Thu Apr 6 18:12:19 GMT 1995

Moved Ethernet repeater power to DPMON CONTROL ROOM power strip.

This is the upline of the powerstrip that it was originally plugged into. This move allows turning the 486 and montior on/off with the powerstrip it is currently plugged into instead of individually, and allows the repeater to be left on all the time.

WEATHER COMMENT: Thu Apr 6 18:15:21 GMT 1995

In thin cirrus bands.

DPMON COMMENT: Thu Apr 6 18:42:10 GMT 1995

Accidentally pulled out plug to Sparcstation during a power reconfiguration exercise. Labelled P00324 with warning that the data ends ungracefully at 1822 or 1823 with no EOFs.

Loaded new tape, P00325, and started up all over. Recovered logs. Boot was slow as I think network is down temporarily.

WEATHER COMMENT: Thu Apr 6 18:45:54 GMT 1995

Still in banded cirrus.

COMMENT: Thu Apr 6 19:15:35 GMT 1995

Network was down at this end. I used a longer rg59 cable to reconfigure the PC location and the connector at one end was flaky, hosing the repeater. Firmed up the connection and the

net came back up.
