

Mauna Loa Solar Observatory Observer's Log

---

Fri Jan 19 17:58:46 GMT 1996

Year: 96 Doy: 019

Observer: koon console Jan 19 17:55

WEATHER COMMENT: Fri Jan 19 17:58:51 GMT 1996

Thick, dark, tall cloud front to the East is moving towards us ahead of the rising sun, lots of lightning happening in that cloud mass, wind=30+ mph from the SSE, temp=35 F. Mauna Kea and Mauna Loa summits are covered with hail.

COMMENT: Fri Jan 19 18:01:26 GMT 1996

Observing is very unlikely today but I'll work on other projects as long as I can before leaving the mountain to do some work in Hilo.

WEATHER COMMENT: Fri Jan 19 18:25:01 GMT 1996

Getting rain and sleet now.

COMMENT: Fri Jan 19 19:27:23 GMT 1996

Weather is just getting worse, I am leaving now to do work in Hilo.
