MKIII COMMENT: Sun Apr 21 19:06:58 GMT 1996

Stopped MKIII so that installation crew can work on spar stuff.

CHIP--Sun Apr 21 19:11:03 GMT 1996

ending tape

CHIP Comment--Sun Apr 21 19:12:44 GMT 1996

Good CHIP images from today. No electrical interference.

Some activity prominence 65 deg.

Polar plumes visible.

Only one flat today. May want to wait for a long day  
with many flats to get a new MLSO flat to send back.

Optical alignment here is not identical to Boulder  
so some change is expected.

(david)
