WEATHER COMMENT: Mon Nov 25 17:21:51 GMT 1996

Although the sun is obscured by clouds right now I started observations with dPMon and CHIP because there some holes in the clouds.

MKIII COMMENT: Mon Nov 25 17:42:46 GMT 1996

Starting data collection.

WEATHER COMMENT: Mon Nov 25 17:43:01 GMT 1996

Clouds have cleared for now.

LOW-L COMMENT: Mon Nov 25 18:07:20 GMT 1996

Removed L00427 from drive #0. Program wouldn't recognize that the spare drive was hooked up as drive #1 (temporarily while regular drive #1 gets fixed), so it didn't write any data to that drive. I used the drive switch and display to define it as unit #1 but still data wasn't being written.

Moved L00428 from drive #1 to drive #0. We will just use drive #0 for now and change the tape when it has 70 or more files on it.

Occulting disk is now 1991" (was 1981").
MKIII COMMENT: Mon Nov 25 21:11:35 GMT 1996
Data look very noisy, lots of radial streaks. Wind from the West might have
been blowing in a lot of dust, wind is now from the NE so maybe data will
improve.
CHIP COMMENT: Mon Nov 25 21:13:13 GMT 1996
Last hour and this hour the Display image doesn't look very good, as if
I can't set a proper Display Gain. I thought it might have been caused
by a bad calibration but after the last calibration it still looks weird.

Pausing instruments and closing the dome while Eric and Michael drive up
alongside the observatory, to keep dust out.

It looks like they won't be driving up so I opened the dome and restarted
the instruments.
