LOW-L COMMENT: Wed Mar 12 20:28:15 GMT 1997

Red parameters discovered this morning as usual, later on found Wing2 Error at -102.60 instead of 0.00. MOF2 RES was at 100.00, MOF1 ENT was at 19.006, MOF 2 ENT was at 15.283, and WEST2 was at 20.850.

Just checked powersupplies and the voltages (5 and 12) looked good.

Wing2 error just passed thru 0.00. MOF2 RES=109.402, MOF2 ENT = 17.426,  
and WEST2 = 23.499.

This could be from opening up the Electronics box??? clouds????
