In cirrus patch.

DPMON COMMENT: Mon Jun 9 17:18:42 GMT 1997

Program had stalled, noticed MKIII was still seeing cirrus, but no cirrus was visible on DPMON image. Cancelled a bunch of Waits to restart.

I think I rewound tape and started over. Had to Kill to recover after program stalled again.

CHIP COMMENT: Mon Jun 9 19:19:55 GMT 1997

This tape write error episode is continuing. I cannot tell if drive has rewound the tape like with the spare drive. I assume that maybe it did because of the similarity in symptoms. I will eject tape while listening to whether there is a lot of rewinding before tape pops out. This is occurring with the LOWL drive replacement.

CHIP COMMENT: Mon Jun 9 19:27:24 GMT 1997

I heard a little bit of a rewind, about 5 seconds worth, before the tape drive went silent, then a bit of mechanism motion sounds, then eject.

Saw a possible EPL at PA 300-315 between around 2000-2030 UT.

MKIII COMMENT: Mon Jun 9 20:35:36 GMT 1997

VDIFF between 1953-2022 UT shows a depletion over EPL.

CHIP COMMENT: Mon Jun 9 20:36:35 GMT 1997

EPL was visible on CHIP, too, looks like an extension of a filament structure visible on front disk, extending over the limb.
