MKIII COMMENT: Mon Jul 7 23:02:00 GMT 1997

OK! 11/44 is back up! We encountered another problem, the new RL controller had the same TSR jumper as the TS11 so we could not use TS11 to make another backup disk in case the previous backups were corrupted by the bad RLO2 and controller. We took a chance that the disks were OK and got lucky so we did not try to fix TS11. Al knows that he only has to send us a proper TSR jumper plug if we want the TS11 to work. Tried to do a CORRECT after testing system, but corrupted version of CORRECT was on this copy. (CORRECT was fixed 9/30/96, this software version was 2/4/96) Had to reload the CORRECT software from PHS' last resort disk (8/31/85) before CORRECT would work. Once that was done, I did CORRECT for both channels. Images in PEEK are old enough, I did not reload last images from damaged disk in case they were corrupted. I decided we should start over. We will need to back up DISK 0 again after we get 10 days of data on there. Meanwhile, I did make a backup of Disk 0 with the working version of CORRECT on it.

SHOULD BE READY TO GO TOMORROW.
