MKIII COMMENT: Wed Oct 8 17:48:29 GMT 1997

Tape kept popping out of the drive, cycled power to tape drive but still had the problem. Loaded a different tape and it worked OK.

LOW-L COMMENT: Wed Oct 8 17:52:25 GMT 1997

L00476 was popped out of the drive #0 as it should have been, cleaned that drive and loaded L00478 into it.

PICS COMMENT: Wed Oct 8 17:53:49 GMT 1997

Still getting double-imaged disk images.

MKIII COMMENT: Wed Oct 8 18:37:49 GMT 1997

The scans stalled with the Write field green, and "ei" messages going to the akamai window. David said "ei" is used for MK4, so he removed that routine from code and I reset the KCC after loading a new tape in the drive.

So far the scans and data writing is going well.
