
Mauna Loa Solar Observatory Observer's Log

Wed Dec 3 17:03:00 GMT 1997

Year: 97 Doy: 337

Observer: koon

WEATHER COMMENT: Wed Dec 3 17:03:07 GMT 1997

Thick altocumulus with medium cirrostratus above that, wind=5 mph from the SE, temp=38 F.

COMMENT: Wed Dec 3 17:05:39 GMT 1997

Will wait for clouds to clear before opening the dome and observing.

COMMENT: Wed Dec 3 17:13:05 GMT 1997

The retaining compound did stick those 2 washers together even though there is still some compound in a liquid state at the edges of the bond. So I guess it dries better in crevices with very little compound present.

Anyway, this means that the bond at the gear/shaft interface for the PICS optical stage should be cured and ready for testing.
