LOW-L COMMENT: Thu Feb 12 18:43:11 GMT 1998

Had a classic crash with those graphic characters on the screen, I thought

we got beyond this when we stopped getting those interrupts from the WWVH

time card. Anyway, the tape in drive #0 was popped out as it should have

been, but the tape in drive #1 was in place and the program was stalled.

Put L00496 in drive #0 and L00497 in drive #1 and cycled power to the

computer to get things going again.

WEATHER COMMENT: Thu Feb 12 18:49:40 GMT 1998

There is a very thin cirrostratus layer up there.

MKIII COMMENT: Thu Feb 12 18:54:04 GMT 1998

Scans look kind of weird, the occulting is good, and nothing is vignetting

the light before the occulter, so the cirrostratus must be causing the

degradation.

MKIII COMMENT: Thu Feb 12 21:24:44 GMT 1998

I'm not sure if data are going to tape. The Write field is green all the time on the KCP, but according to the akamai window sometimes records are being written and sometimes not.
