MKIII COMMENT: Sat Feb 14 18:04:04 GMT 1998

Strange, before the 1756 ut scan there were no gif files in the data directory and therefore none being displayed via xanim. So I checked the directory right around 1756 and suddenly gif files were starting to be placed there as usual. It looked like there wasn't enough space in /local/usr/local/bin/imconv and that temp.gif could not be accessed, according to the error messages in the cmdtool window. Those error messages aren't being shown now and the xanim window is up and running as usual.

PSPT COMMENT: Sat Feb 14 18:09:59 GMT 1998

Program crashed in the typical place, while doing the initial exposure testing. So I exited IDL and used Restart to skip all the time consuming initializations that have already been done, then it will continue and hopefully observe correctly.
