Lost guiding in Dec., reset dec. guider for spar.
PSPT COMMENT: Sun Feb 22 21:39:35 GMT 1998
Telescope was pointing at the horizon in the west.  Stopped program and tried
Restart, no help.  Stopped program and tried Run, no help.  Stopped program
and tried cycling power to the blue cabinet then tried Run, no help.
The declination moves during startup but the RA stays at the same location.
PSPT COMMENT: Sun Feb 22 22:01:49 GMT 1998
I sent a message to Haosheng for help with the RA pointing problem.  At this
point I don't know what to try next.  So I exited the program and typed in Obs
to get the menu that allows me to type in "e" to exit gracefully, that

closes the dust cover and stows the dome, etcetera.  It may be that the
computer just needs to be rebooted, but it is compressing files now so
I won't try that.

PSPT COMMENT: Sun Feb 22 22:10:49 GMT 1998
Earlier when I mentioned that I cycled the power to the blue cabinet I
meant the single switch on the back that we always use, this has been
called PSPT power.  I didn't cycle the power to the computer rack or
anything else in the cabinet that isn't controlled by that switch in back.
