
Mauna Loa Solar Observatory Observer's Log

Tue May 5 16:28:31 GMT 1998

Year: 98 Doy: 125

Observer: yasukawa

WEATHER COMMENT: Tue May 5 16:29:56 GMT 1998

Cool, in continued thick cirrus overcast. Yesterday's vacation day probably resulted in no loss of a chance for good data due to overcast. Light south breeze.

LOW-L COMMENT: Tue May 5 16:32:29 GMT 1998

L00512 found popped out of temporary drive 0. 5 files of data already written to temporary drive 1. Drive failure must have occurred yesterday, pointing to a flaky exabyte drive as the short tapes occur in the top drive regardless which interface designation is writing to it. Cleaned drive and loaded L00514. Data currently writing to L00513 in temporary drive 1.
