WEATHER COMMENT: Fri May 15 16:30:55 GMT 1998

☉ol, in thick altocumulus and broken cirrus, no shadows,

Some clear holes to west, south wind.

PSPT COMMENT: Fri May 15 16:59:05 GMT 1998

Position was running on this morning. Since nothing else was happening and system was left on overnight for Haosheng to test, I assumed that a reset was in order as there was no messages to indicate that I should leave things alone. I hit a key on the PC to stop the execution of that step.

Going down to GONG to dump the tower drive tapes as requested.

PSPT COMMENT: Fri May 15 19:59:04 GMT 1998

Haosheng advised that he thinks the DSP board in the PC is hosed and will be mailing a replacement out on Monday. Until then, PSPT will be left off, including PC. Workstation is on. Loosened clutch and pointed spar to east, near home position. Dome also ran to north instead of to south stow position. Unplugged rotator from PC and manually rotated it to south.
