LOW-L COMMENT: Sat Jun 13 16:44:16 GMT 1998

L00522 popped out of Test drive #1 as it should have. Cleaned that drive
and installed L00524.

PSPT PROBLEM: Sat Jun 13 18:58:16 GMT 1998

The first time I used Run the telescope didn't point at the sun but it
was acting like it was pointed and the sky was too bright, it was
giving that message where you need to type q to quit. The second time
I used Run the telescope got stuck with those timeout messages, I let
it go to see if it would clear but it didn't so I eliminated the messages
by holding down CTRL-C until they stopped printing to the screen. I just
used Run for the third time, I'll see what happens next.

LOW-L PROBLEM: Sat Jun 13 22:14:50 GMT 1998

Program crashed at 21:55:00, screen frozen, instrument still pointing at or near the sun. Removed L00523 from drive #0 with only 6 files on it.

Moved L00524 from Test drive #1 to drive #0, installed L00525 in Test drive #1. Restarted.

LOW-L PROBLEM: Sat Jun 13 22:35:37 GMT 1998

Computer doesn't boot up. Cycling power causes the message:

DRIVE NOT READY ERROR

Insert Boot Diskette in A:

Press any key when ready

I tried doing that with the boot disk I found with the LOWL software, but that just leads to a huge list of error messages. If I do a warm reboot I once got a message similar to:
operating system not installed

then every other attempt gave the same "DRIVE NOT READY" message.
I'm going to need some telephone help with this one. I'll try again tomorrow. LOWL is down for now.
