\*\*MKIV PROBLEM\*\* Fri Dec 18 17:23:52 GMT 1998

KCC computer did not boot up initially and reset did nothing. Monitor was blank (standby mode) and akamai window just displayed "connected".

Fail LEDs were lit on VME micro, corrector and analog cards in KCC.

Powered down, waited, and powered back up. KCC booted properly and displays came up OK.

WEATHER COMMENT: Fri Dec 18 18:29:59 GMT 1998

In thin cirrus.

Fri Dec 18 18:34:37 GMT 1998 MKIII Start Cal

PICS COMMENT: Fri Dec 18 18:39:12 GMT 1998

Alice requested the "magic fix" on PICS for the apparent shutter problem of a few days ago. Seems the problem recurred after yesterday's

Special run. David called in response to Alice's request. Exposures

are currently good. We decided to queue up the magic fix, which is

going to video mode, setting up halphadisc parameters, and exercising

the shutter with exposures of varying lengths using Camera program in

the Manual window, queueing it up for a time when we see the

shutter problem so that there is a before/after result to draw some

conclusion from. David also noted some suspicious code in Patrol.

He will be changing it.
