***** EVENT COMMENT *****: Thu May 6 18:15:23 GMT 1999

CHIP shows that a filament has lifted off in the SW as seen in the difference between the last two hourly images.

PICS COMMENT: Thu May 6 18:16:07 GMT 1999

The EDT board and Kodak camera checked out OK, and the test images I took down here look good. Now it's time to install the camera in the instrument and try it out on the sun.

COMMENT: Thu May 6 19:00:54 GMT 1999

Bumped the Spar and lost guiding for a while when I installed the PICS camera.

COMMENT: Thu May 6 20:12:40 GMT 1999

Extended the dome slot.

PICS COMMENT: Thu May 6 20:15:25 GMT 1999

The new camera works fine in the instrument. I got an excellent focus at around 1945 ut, which is about the middle of our typical observing day. The seeing was good and the sky brightness was about normal -- not as bright as it has been in the last few weeks. I started Patrol and data

are being collected.
