PSPT PROBLEM: Sat Oct 9 22:29:53 GMT 1999

"Stow" program still doesn't work, it gives error messages similar to trying to run the pspt_action.pro program with end added as a manual

typed single line command. "Obs" will shut down and transfer data if the disk is nearly full but won't transfer data for a regular day from the images to the archive directory. Also had what looked like vignetted images during the noon sequence, dome was partially blocking the telescope so I moved it manually but program didn't recover from "low light level" messages. Will have to skip noon sequences until Haosheng can find the time to help me with some of the software problems.
