LOW-L COMMENT: Sat Jun 24 16:57:44 GMT 2000

Tape L00723 had more than 70 files on it so I replaced it with L00724 and restarted observations.

****PSPT PROBLEM****: Sat Jun 24 17:54:07 GMT 2000

Same stall as on 6/22, maybe caused by clouds. No error messages on the IDL window as usual, just the timeout counter messages, no response to keyboard or mouse, obs window shows it was trying to take a Red Images as the last scrolling message. Had to "kill -9" the runPspt.pro task after opening another xterm window. Then had to do the typical 2 cycles of "Pspt" in the IDL window, PSPT/Start Up, back to the IDL window and CTRL-C to get the timeout counter past 600, exit from IDL, run Pspt again, PSPT/Start Up again, then DATA/Daily Obs, all to get the program running again. We've mentioned this problem of having to restart twice ever since PSPT was first installed here, it is just a little different because of the different GUI. We have also mentioned this mysterious stalling problem several times, it is new along with the new software.
