MKIV PROBLEM: Thu Jul 11 17:01:46 GMT 2002

Couldn't start up the KCC in the usual manner for 2 tries earlier. I then let it sit with the main power switch turned off for a while until the fog cleared then I tried it and it worked normally, then I started the log and all the instruments. When it wouldn't start, the akamai window was empty - no scrolling messages like usual, and the Sony GUI monitor stayed in power saving mode. All looks normal now.

PSPT PROBLEM: Thu Jul 11 17:22:44 GMT 2002

Stalled at startup "taking 3 dark frames", killed runPspt.pro, restarted.

PSPT PROBLEM: Thu Jul 11 17:39:22 GMT 2002

Pointing is off, doing guider ephemeris calibration "gdr ephmcal" etcetera.

COMMENT: Thu Jul 11 17:46:40 GMT 2002

I will hold off on: cleaning the Sky Trx filter, cleaning the Mk4 O1, and videotaping the Mk4 O1 guider motor limit switch actuators due to intermittent clouds passing over.

WEATHER COMMENT: Thu Jul 11 17:48:44 GMT 2002

Intermittent low clouds passing over.

PSPT PROBLEM: Thu Jul 11 20:42:47 GMT 2002

I closed down due to the type of clouds that are passing over, but the shutdown stalled when it was supposed to point the dome to the stow position.

I killed runPspt.pro, restarted Pspt, tried Shutdown again and it continued

properly.
