PSPT COMMENT: Mon Jul 29 16:41:29 GMT 2002

Starting observations.

PSPT PROBLEM Mon Jul 29 17:00:57 GMT 2002

Did an "exit" and then "pspt" on PC before startup this morning.

Guider pointed "close" to sun at Startup but not close enough for the

Daily obs program to find the sun, program pointed farther off as a matter of fact. Aborted and ran the gdr ephmcal routine. Re-Started up.

Restarted Daily Obs.

PSPT PROBLEM Mon Jul 29 22:16:37 GMT 2002

Today's dome stall was on PC only. I exited pspt.exe and restarted it this morning before start-up. At shutdown, gui stalled at Parking Dome.

PC was stalled at dome goto 7000, with followup dialog onscreen and cursor (underline) zipping around the follow-up line. I hit enter on PC and the shutdown routine continued to completion without

parking the dome. Did a dome goto 7000 after the shutdown routine finished up to park the dome and exited gui and IDL normally.
