A NEW TAPE HAS BEEN PUT INTO KAIEE DLT DRIVE, Sun Jan 5 18:28:31 GMT 2003

COMMENT: Sun Jan 5 18:30:22 GMT 2003

We only get one day of data per DLT tape now that we have longer obs days.

COMMENT: Sun Jan 5 22:58:16 GMT 2003

Lost guiding, repointed and reset guider.

COMMENT: Sun Jan 5 23:34:29 GMT 2003

I haven't noticed any vignetting of mk4 or PICS today, the dome guiding appears to be set well, it gets really tight around solar noon (2230 UT) as usual - with only an inch or two between the edge of the O1 lenses and the shadow of the edge of the domes. This will be a bigger problem around the summer solstice at solar noon as we've noticed in the past, we may have to turn off the dome rotator at times like that. I can see that the PSPT will start to be vignetted soon, that should be easy to fix because only one side of the slot (left side looking out through it) vignets the telescope, so there is plenty of room to readjust and calibrate the dome pointing I think.

MKIV COMMENT: Mon Jan 6 00:23:16 GMT 2003

Centered occulting.

PSPT COMMENT: Mon Jan 6 00:23:26 GMT 2003

I recalibrated the dome pointing, the telescope should stay clear throughout the entire day, I took into consideration the state of early morning pointing too. In case I adjusted it too far there could be telescope vignetting from the right side of the slot in the morning - but I doubt it. I left instructions on how to set this in the logbook just in case.

ECHO PROBLEM: Mon Jan 6 00:31:17 GMT 2003

The disk images were dark so I quit and restarted echosys.

PICS PROBLEM: Mon Jan 6 00:40:20 GMT 2003

Stalled with Program: PICS_cal_1 , this must be the same problem that has happened on all long days so far. did a Kill/Run cycle to fix it.
