****PSPT PROBLEM****: Fri Mar 14 18:38:00 GMT 2003

PSPT crashed at 1815 UT, in Photo Data, Taking CaK image (1/3). Killed runPspt.pro and restarted.

****** EVENT COMMENT ******: Fri Mar 14 18:43:51 GMT 2003

Limbflare at PA 70-80 ongoing at this time. Start time uncertain until animations get fixed.

****MLSO PROBLEM****: Fri Mar 14 18:46:52 GMT 2003

Bunny is working to fix the hoike animation failure. Alice is on vacation today.

MLSO PROBLEM Fri Mar 14 19:18:27 GMT 2003

Bunny got the broken processes going again and we rebooted hoike and got the display going. Images prior to the fix are not getting to oopu where they are picked up by hoike, (actually, the gif conversions to the early images are not occurring and the gif images are not getting to oopu) but the images after the fix are being converted and sent over. Since mk4 images are converted at nahenahe, all of those images from startup to the current images are being sent over and displayed on hoike.

**** EVENT COMMENT **** Fri Mar 14 19:22:25 GMT 2003

Now that the animations are going, I can also see a large filament on the southwest quadrant of the disk has been changing.

PSPT COMMENT: Sat Mar 15 02:24:28 GMT 2003

Shut down PSPT. Leaving filter heater on overnight.

Potential concern---temperature controller probably only acts as a heater controller, current temperature is 86.9, higher than the set temp of 80.0. Ambient temperature is higher than the filter controller setpoint.
