\*\*MKIV PROBLEM\*\*: Sun Apr 20 17:52:21 GMT 2003

No problems with the barrel so far today. But the O1 guiders aren't working properly, the stepper motors for that feel energized whether the power is turned on downstairs or not (that toggle switch below the table to the right of the Nahenahe station), i.e. the shafts can't be easily turned. So for now I had to disconnect the stepper motor cable (big, gray, threaded connectors) for each of the 2 motors up near the O1 and turn the motors to their normal early morning positions and then screw the connectors back on to energize the motors and hold them in place - otherwise the stage moves off in the East direction.

Earlier today I saw fuzzy data images displayed, the spar was oscillating in RA, to fix this I slightly loosened the RA axis clutch using that big hex wrench up on the platform.
