PSPT PROBLEM : Sun Oct 9 19:42:00 GMT 2005

There were 2 exabyte tape drives sitting on the table in the PSPT dome, they have labels from HAO that seem to indicate that they were OK on 9/19/05.

I installed one and it took the tape OK. I have connected the network cable so Alice can check things and see if that old tape drive was really bad.

Alice just called and said that old drive may have worked last night despite the filename list I saw on the screen, she will check it via network cable and let me know later. So a new tape drive is installed now, but the old one may really be OK. Alice said we received three tape drives recently and that Eric replaced a bad one and sent it back to HAO, so that's why there are

2 known good tape drives here and one that may also be good pending her tests.
