PSPT COMMENT: Wed Dec 21 23:10:03 GMT 2005

Sorry, was busy with the troublesome exabytes. Forgot to record temperatures off of thermometer taped to Xedar box. Temperature is now 23 C.

Was supposed to record temperatures once per hour from startup until around 2030 UT.

Spare Exabyte also did not work. Removed it and installed last spare

Exabyte drive. Alice checked it out remotely.

Exabyte removed this morning and the spare that did not work will be shipped back to Vic for testing and repair/replacement. Last spare mounted on kenobi and checked by Alice--it is working (for now). Yesterday's transfer tape will be mailed to Alice. We do not want to stick it into the last working drive in case it is problematic and it is already packed for shipment with stamps committed in any case.
