WEATHER COMMENT: Thu Jul 27 20:04:24 GMT 2006

Blowing mist coming up from the west, domes closed and instruments idled.

\_\_\_\_\_end\_\_\_\_\_

\*\*MKIV PROBLEM\*\*: Fri Jul 28 00:16:14 GMT 2006

From what I see in the logs and my own experience the barrel problem seems to have similar symptoms each day. At startup i

t won't move, then 30-45 minutes  
later it suddenly becomes functional. Could this be a pcb or power supply with  
a temperature problem? When cold it fails but as the temperature of the control  
room and card cages comes up it begins to work and continues to function until  
it cools down overnight.
