PSPT PROBLEM: Fri Sep 1 18:44:58 GMT 2006

Still getting under/overexposed images. Swapped out shutter #4812 and replaced with shutter #4161.

____end____

PSPT PROBLEM: Fri Sep 1 19:10:23 GMT 2006

Got same result with shutter #4161. Determined that problem was not shutter but a lost filter wheel. Restore shutter #5433 into system.

Tried homing filter and then doing an init sys. That caused the ephemeris to go to the wrong locations. Shutting down and re-starting up

to reset ephemeris and filter values.

Observing again, all appears OK now. Blue image at end of startup routine looks good (was dark due to solid block in place when goto blue was called during the failure).
