CoMP COMMENT BY BEN: Wed May 25 17:29:21 GMT 2011

I noticed I could see the big (NE 90 deg Clockwise from the post) pair of artifacts on the occulter alignment screen. So I attempted to do a quick check. The results of the check are inconclusive but I feel like the problem might be coming from either the edge

of the occulter. But without moving it I dont know how to check with out rotating the occulting disk.

NOTE BY BEN: Wed May 25 17:37:23 GMT 2011

During the CoMP inspection the spar was unbalanced to the point that we fell off guiding a couple of times and ruined the first MK4 calibration.

Large prominence erupting on the east limb, looks to have started a few hours before we got on sky this morning.

****EVENT COMMENT BY BEN****: Wed May 25 19:34:03 GMT 2011

At PA 100, I see something that looks like a CME but it isnt moving/expanding. This appears strongly correlated with the large promiance.
