\*\*CHIP PROBLEM COMMENT BY BEN\*\*: Mon Aug 8 17:03:57 GMT 2011

The Alakai monitor is blank this morning with no video signal. The cable looks to be physically connected everywhere and the observing sequence looks fine; maybe the t\_disp process failed to start up. Assuming nothing else looks bad before then I will

reboot alakai when I moved the shutter to see if the display comes back.

NOTE BY BEN: Tue Aug 9 02:47:12 GMT 2011

Since it clouded up at 20:30 I have been poking around various parts of the spar and the guider rack trying to understand how the interconnections work.

I am certian that I didnt bump anything and all mechanims appear to be working. But I just wanted to give a heads that cables could have lossened today
