MKIV PROBLEM COMMENT BY BEN: Wed Jan 25 18:41:48 GMT 2012

Akamai crash with following error:

Execption at interrupt level:

Access Fault

Program Counter: 0x001e8ba6

Status Register: 0x2100

Access Address : 0x02000000

Special Status : 0x0105

Regs at 0xab930

____end____

MKIV PROBLEM COMMENT BY BEN: Wed Jan 25 18:43:52 GMT 2012

After this akamai rebooted but the video signal on the monitor did not change.

CHIP COMMENT BY BEN: Thu Jan 26 02:01:02 GMT 2012
Kii check summary.

-Repeat test from yesterday using photon hardware with kii edt board and kii hard drive. Here I found the same Async memo ry error that we got yesterday. Various google searches seem to say this problem is likely a bad cpu.

-Moved kii edt board and kii hard drive back to kii shell then replaced kii ram with photon ram. Kii then ran fine for about 2.5 hours before crashing with a watch dog timer fault.

-Restarting kii ran again for about 45 minutes.

-Next the photon cpu boards were swapped into kii, this gave the same Async errors seen when the kii hard drive was in photon. I think this conclusively says the one or both of the photon processors are bad.

-Next the nene edt board was swapped into kii

The final configuration of kii for today is: the kii box with photon ram and nene edt board. It seems to work during the 15 minute test I able to conduct before the clouds rolled in. Hopefully tomorrow we get a better test. I really hope th

e edt board

was the problem.

PSPT PROBLEM COMMENT BY BEN : Thu Jan 26 02:06:10 GMT 2012

I found some oil on the table at the north end of the pspt pier. It looks like it is dripping from the motor/drive train of the shutter.
