WEATHER COMMENT: Wed May 8 16:36:40 GMT 2013

temp 43f, wind 5mph from S, skies a little hazy weak temperature inversion just below the observatory is keeping the very large quantity of volcanic haze trapped in the saddle. Currently there are no trade winds in the forecast so this inversion may break down

bringing more of that haze above the observatory

NOTE BY BEN: Wed May 8 20:16:13 GMT 2013

After dome reconfig, I lost dec guiding. Spar seems miss-balanced N-S (shabar?), hanging a little weight off the COMP optics box seems to have fixed the slow southern drift in dec
