**KCOR PROBLEM COMMENT BY stueben **: Tue Nov 19 18:07:53 GMT 2013

ILX temp controller shows temp below 35C. Temp is coming up, waiting for temp to stabilize before starting kcor.

COMP COMMENT BY berkey: Tue Nov 19 18:34:42 GMT 2013

Comp.vi was still pointing to c:\comp\ for temperature recordings. So when the directory was removed yesterday we started getting some issues with comp throwing an error in the "wait for input" state where it normally reads/records baseplate/etc temps. This was changed we should now look for the file in C:\Documents and Settings\iguser\My Documents\COMP-M\trunk\Software with the rest of the comp software.

KCOR COMMENT BY stueben: Tue Nov 19 22:52:44 GMT 2013

Low FLC temperature was the ILX controller output being off - no immediately obvious reason for it to be off. The output on led is at the bottom of the front panel area marked MODE.
