
Mauna Loa Solar Observatory Observer's Log

Fri May 2 16:30:00 GMT 2014

Year: 14 Doy: 122

Observer: berkey

WEATHER COMMENT: berkey: Fri May 2 16:30:03 GMT 2014

temp 42f, wind 2mph from S, sky mostly clear with some light haze

____end____

CoMP COMMENT BY berkey: Fri May 2 16:34:32 GMT 2014

The Focus nsc100(or nsc200) was in local this morning. Symptoms were a focus routine that ran for many minutes, since lab view was waiting forever to get control of the controller.

GENERAL OBSERVATORY COMMENT BY berkey: Fri May 2 18:32:54 GMT 2014

ideling comp/kcor for cirrus

____end____

Fri May 02 19:31:35 GMT 2014 KCOR Start Synoptic Patrol

Fri May 02 19:37:40 GMT 2014 KCOR End Patrol

CoMP COMMENT BY berkey: Fri May 2 19:52:41 GMT 2014

Created a disk image of the CoMP OS/code disk. Copied image boots up fine and seems to work. Reverted back to the source disk. So we now have a ready to go backup disk incase something happens to our source drive.

CoMP COMMENT BY berkey: Fri May 2 23:06:57 GMT 2014

We seem to have bad data for part of the last few weeks. It looks like light is passing though CoMP but some how we aren't modulating/filtering properly to see the conrona.

____end____

CoMP COMMENT BY berkey: Fri May 2 23:22:24 GMT 2014

Most likely reason for the loss of corona, is we may be addressing the two meadowlark controllers randomly at boot. If thi

s is true we will be sending the wrong voltages when controller 1 gets addressed as the second controller. I dont know if we have a way to figure out if this is true. But the computer rebooted on April 17@3:18am, April 22 @4:48pm, April 24 @1:27pm, May 2nd @ 9:08 and 9:47am. To first order this explaintion seems to work with these reboot times.

___end___

CoMP COMMENT BY berkey: Sat May 3 00:23:35 GMT 2014

Configured comp for ssh access
