GENERAL OBSERVATORY COMMENT BY waters: Wed Mar 25 17:51:41 GMT 2015

After getting some clarificatin from Alfred, I started the SGS data logging at 17:45 UT. Seeing varied between 2.15-2.38 arcsec and the length of time was 600 seconds.

GENERAL OBSERVATORY COMMENT BY waters: Wed Mar 25 18:23:39 GMT 2015

Unfortunately, the data logging file that had a length of 600 seconds was too big after compression to send. After some tweaking, I started the SGS data logging at 18:11 UT, seeing varied between 2.42-2.72 arcsec and the length was 220 seconds.

After compression, this file just made it possible to send.
