
Mauna Loa Solar Observatory Observer's Log

Mon Aug 3 17:01:38 GMT 2015

Year: 15 Doy: 215

Observer: berkey

WEATHER COMMENT: berkey: Mon Aug 03 17:04:30 GMT 2015

Temp: 49.4f, Humidity: 97%, Pressure: 28.594in, Wind: 3mph from East, Skies: clear above with a fog bank to the east and patch clouds around. Looks like we *might* get some data this morning. Domes are open and waiting for the sun to total pop out of the fog bank.

____end____

GENERAL COMMENT BY berkey: Mon Aug 03 17:14:15 GMT 2015

Well that didn't last long. Closing the dome.

COMP COMMENT BY berkey: Tue Aug 04 02:06:06 GMT 2015

Made a couple small changes to the main screen GUI so display only the file name of recipes and not the whole path.

After this I "forked" the to start building/testing a new logic for the CoMP control system. In the current system we load a program "cookbook" every day that has a bunch observations "recipes". Over time the default cookbook has evolved to actually contain 2 observing programs SYNOPTIC and WAVES. With some deep(ish) knowledge of the two programs one could guess where a data file came from but there is no mechanism to explicitly record it.

So in the forked code I built up a new logic scheme that uses a menu that sits on top of the old cookbook structure and can cycle through cookbooks. The cookbook and recipe names to be run are then captured in the fits header for image 0 so that users can learn what program the data was taken in from the fits header itself. Currently the daily.menu file is setup to contain synoptic-00001.cbk and waves-00001.cbk, with the assumption that over time as these programs evolve (more Helium?) we can create new cookbook files with incremented file names such that we can always go back to one of the old modes.

At this point I think the code works pretty well and has passed all the tests I can think of throwing at it. But I want to give it a few more days of rainy testing and get the input from a few other people before we think about running it for real.

CoMP COMMENT BY berkey: Tue Aug 04 02:09:06 GMT 2015

Note fits files 20150803.153528.fts->20150803.153955.fts were taken with the forked observing code in its "complete" form.
