Mon Sep 07 17:05:51 GMT 2015 KCOR Start Synoptic Patrol

PSPT COMMENT BY waters: Mon Sep 7 16:57:45 GMT 2015

Double checked cables for Pspt for any obstructions and to make sure all connections were good. Restarted the Sun and DOS machines and attempting to run Pspt. Pspt seems to get hung up on the command 'Shutter Set' which now appears after 'Take 3 dark'. It just keeps looping even after trying 'exp' or 'ip exp' to jump start it.

GENERAL OBSERVATORY COMMENT BY waters: Mon Sep 7 18:24:28 GMT 2015

A single cloud came up out of no where and obstructed the Sun during the Kcor calibration. Will try to do another one a bit later.

PSPT COMMENT BY waters: Mon Sep 7 18:58:38 GMT 2015

Tried switching the shutter box from spare to online to see if it would clear up the "Shutter set" hang that appeared after the "Take 3 darks". Also checked the camera cables and the UniBlitz box to make sure cables were seated properly and in the correct position. Unfortunately, this did not clear up the hang up that we get. At least everything is running and the problem we're getting is completely different than when this all started.
