GENERAL COMMENT BY berkey: Wed Jan 13 17:39:40 GMT 2016

Phone was down this morning. One of the connectors in the nest of old wiring became disconnected at some point in the last couple days. The lack of connection was noticed by the blinking red inuse light on the office phone, when the phone was obviously not in use.

GENERAL COMMENT BY berkey: Wed Jan 13 22:24:30 GMT 2016

sgs realigned. Got an oscillation after putting in new guiding targets but I was able to dampen them by hand and now the guider seems happy again.

GENERAL COMMENT BY berkey: Thu Jan 14 02:52:20 GMT 2016

contractors worked on Roof rafters and roof plating today. The roofing contractor was on site today as well.

Tomorrow I think we should be seeing some sheeting on the interior walls of the dome near the location of the new dome rotator. Some of the panels will be left off until the wall under the south edge of the dome is shored up. Roofing installation, and some electrical work.

Fabian had some comments for the electrician. He would like to go up 1 size on the flexible conduit for the nets jack near the dome controller. He would also like to see the network jack on the back of the pier to be replaced with the same types of boxes used for the rest of the nets boxes. The netboxes also need some bushings on the both ends of the pipes; the PSPT nets boxes has the bushings the other nets boxes do not.

GENERAL COMMENT BY berkey: Thu Jan 14 02:56:26 GMT 2016

Decommissioned old ULUA today. Moved some of the display facilities over to mlsoserver. We should monitor resource usage as the xanims seem to make ulua crawl. We also have the issue that the mlsoever video card can only display 1280x1024 so we should look at temporarily shrinking the gifs to better accommodate the screen.

I have also moved the davis station from ulua to mlsoserver but I think we are still missing one of the software packages need to interface with it. Until then the automatic weather logging is down.
