
Mauna Loa Solar Observatory Observer's Log

Sun Nov 20 17:03:17 GMT 2016

Year: 16 Doy: 325

Observer: waters

WEATHER COMMENT: waters: Sun Nov 20 17:04:32 GMT 2016

Temp 42F with windspeed at about 12mph from the Southeast. Scattered cirrus to the West and a little bit in the East but currently, the Sun has a clear path.

Sun Nov 20 17:16:23 GMT 2016 Kcor Focus/alignment program exited

KCOR COMMENT BY waters: Sun Nov 20 17:06:02 GMT 2016

I got the same error I got last Sunday that caused me a bit of trouble.

Exception occurred in SPiiPlusCOM660.Channel.1: Code 130, Timeout expired in K-Cor - ACS - Enable.vi->K-Cor - Mechanism - Get Mech Position.vi->K-cor MC4U Controller.vi

I followed the steps that I had written up last Sunday but they didn't work. I then remembered that I also pulled the top two of the four big plugs on the top Nema box, as if doing a proper reboot after a ups failed. This got SPiiPlus happy again. I should write the steps as I do them, not later. Anywho, Kcor occulter again was out of focus. Moved it back in and will start taking data once it is above the dome.

Sun Nov 20 17:39:25 GMT 2016 KCOR Start Synoptic Patrol

Sun Nov 20 17:58:43 GMT 2016 CoMP Paused for clouds

Sun Nov 20 17:58:49 GMT 2016 KCOR End Patrol

GENERAL OBSERVATORY COMMENT BY waters: Sun Nov 20 17:59:06 GMT 2016

Some cirrus bands coming in from the West. Kcor and Comp idled for a bit.

____end____

GENERAL OBSERVATORY COMMENT BY waters: Sun Nov 20 19:40:26 GMT 2016

Cirrocumulus coming in from the South-Southwest at present but it looks like part of it isn't in the path of the Sun, so we might get some clear sky in a bit. Here's to hoping...

GENERAL OBSERVATORY COMMENT BY waters: Sun Nov 20 22:13:54 GMT 2016
Comp occulter adjusted.

____end____

Sun Nov 20 22:38:13 GMT 2016 CoMP Paused for clouds
Sun Nov 20 22:38:32 GMT 2016 KCOR End Patrol
GENERAL OBSERVATORY COMMENT BY waters: Sun Nov 20 22:38:42 GMT 2016
Some clouds have come up from Saddle, Kcor and Comp idled for a little bit.

____end____

GENERAL OBSERVATORY COMMENT BY waters: Sun Nov 20 23:02:17 GMT 2016
There's a dark cloud just east of the observatory, closed the dome just in case, since there are clouds covering the Sun at the moment. Will keep an eye out.

____end____

GENERAL COMMENT BY Observer: Mon Nov 21 02:08:37 GMT 2016
Ben has graciously written up a proper way to deal with the time exception and also with ups failures:

- 1-Shut down windows PC
- 2-Switch off the down stairs pullizii
- 3-Switch off the PXI chassis box in the top nema box
- 4-Switch off the 2 pullizii's in the top nema box

Count 11 (or so)

- 1-Switch the 2 pullizi's in the top nema box back on
- 2-Count 2 11.4
- 3-Power up the PXI chassis
- 4-Close up the top nema box
- 5-Down stairs power up the pulizzi
- 6-Count to 6 or maybe 8
- 7-Power up the PC
- 8- Note: for whatever dumb reason the first time you run Focus.vi it doesn't connect to the camera and seems to require a "shutdown" and restart of the VI before the camera is ready.
- 9-Align the instrument and observer

Mon Nov 21 02:24:14 GMT 2016 CoMP Restarted from pause
Mon Nov 21 02:24:14 GMT 2016 COMP End Patrol
GENERAL OBSERVATORY COMMENT BY waters: Mon Nov 21 02:28:39 GMT 2016
It looked promising for the rest of the afternoon after the clouds had cleared the Suns' path but it just wasn't meant to be. Ah well, have a wonderful week everyone!
