WEATHER COMMENT: waters: Fri Dec 23 17:09:15 GMT 2016

Temp 41F with windspeed at about 22mph from the Southwest. I think the wind is actually higher than the reading because the anemometer that we get our readings is blocked by our building and if you step out from the buildings shelter, I have to brace myself a bit. Will wait for calmer winds before opening the dome. Otherwise, the sky is clear.

GENERAL OBSERVATORY COMMENT BY waters: Fri Dec 23 19:32:16 GMT 2016

The wind seems like it is calming down a bit, staying below 20mph from the Southeast. However, since we are currently opening in that direction, the spar is shaking frequently between -25 and 25 arcseconds in the dec. I have raised the lower part of the dome shutter to reduced the effect on the spar but the instruments aren't quite above it yet. Should be able to start up once they are above the edge.

GENERAL OBSERVATORY COMMENT BY waters: Fri Dec 23 20:51:49 GMT 2016

Can see a visible shake when starting up the Focus.vi to get the Kcor O1 centered and focused, which is making the recent ring a bit hard. Windspeed is at about 17mph from the Southeast still; will wait for it to calm down more or until the dome slot is out of the winds path.
