CoMP COMMENT BY berkey: Wed Dec 06 20:59:03 GMT 2017

Bug was found that lead to the ND filter wheel position not getting updated after every filter move.

This was seen as the fits header saying ND 1.0 is in beam but the data shows it was not. I think this could only happen if we exited the synoptic program during a 1083 recipe, did a realignment and then entered into to the waves program.

Changes have been made the labivew code and waves recipe to mitigate this. Now all filterwheel moves get pushed into the global varibale (not just recipe based moves. We also expilctilty ask for ND clear at the start of the waves program.
