GENERAL COMMENT BY berkey: Sat Mar 24 02:20:24 GMT 2018

Pulled the sgs chasis out of the nema enclosure today. Design of the encolsoure makes this task kind of difficult so instead of remounting the borrowed chassis the nema box is on its back with the borrowed chassis set inside and not remounted as the sgs system was designed. I think we should hold off on mounting a chassis until our box has been repaired/replaced
