Year: 18 Doy: 104

Observer: waters

WEATHER COMMENT: waters: Sat Apr 14 16:09:36 GMT 2018

Temp 36F with windspeed at about 6-11mph from the South. Thin and scattered cirrus from the Northeast to the Southwest, going counter-clockwise from North, is covering the sky with a nice hole towards the East. Cumulus sitting on the Eastern horizon at the moment and depending on how fast the clouds are moving, we may or may not get to start up before the cirrus covers the rest of the sky.

GENERAL COMMENT BY waters: Sat Apr 14 17:03:50 GMT 2018

Unfortunately, cirrus moved in and is covering the whole sky at present. Waiting for better conditions before starting up

.

WEATHER COMMENT: waters: Sun Apr 15 01:30:18 GMT 2018

Unfortunately, the sky only got worse, with low clouds on the mountain. Hoping tomorrow will be better.
